## Introduction and Purpose

This report provides an accounting of credit activity under the General Business Corporation Franchise Tax (Article 9-A). The report does not include credit activity attributable to banks, insurance companies or utilities, because such entities are taxable under other articles of the tax law. This study is mandated by Section 109(a) of the Business Tax Reform and Rate Reduction Act of 1987 (BTRRA). The data used to generate this report come from an annual study conducted by the Office of Tax Policy Analysis (OTPA). The study is based on the latest available data drawn from New York State corporation tax returns. These data pertain to corporations whose taxable year begins on or after January 1, 1994, and ends on or before November 30, 1995 (hereinafter referred to as the 1994 tax liability year).

The report includes a focus section. This year the focus section presents an analysis of the alternative minimum tax credit covering the period 1992-1994. The section presents data, graphics and analysis of the credit usage during this time period.

Definitions and descriptions of the various tax credits for the time period analyzed appear in Appendix A. Highlights of tax law changes after 1995 appear in Appendix B. Appendix C contains the legislative mandate for the report.

#### Highlights for 1994

- Corporate taxpayers *earned* a total of \$195 million in credits, *claimed* a total of \$1,387 million in credits and *used* a total of \$93 million in credits against their Article 9-A liability.
- The investment tax credit accounted for almost 92 percent of all tax credits used.
- The manufacturing industry accounted for more than 75 percent of the value of all tax credits used.
- Over 85 percent of total credits used were in amounts of more than \$100,000.

Page 2 1994 Art. 9-A Tax Credits

# Focus Section: Analysis of the Alternative Minimum Tax Credit - 1992-1994

#### Purpose

This is the second in a series of focus sections in this report highlighting a particular area of credit activity. The focus section for this report presents historical data analyzing the alternative minimum tax (AMT) credit. The profiles include the amount of AMT credit used by tax base and major industry group. The analysis also contrasts AMT credit usage with the AMT tax paid, for both number of taxpayers and dollar amounts. The tables include both the number of taxpayers and the amount of credit used for each profile from 1992-1994.

Description of the AMT Credit

The AMT credit was enacted in 1990 to provide corporations paying the AMT a credit for a portion of the AMT.<sup>1</sup> The credit is available for use against tax computed on entire net income (regular tax). The credit cannot reduce a corporation's tax to less than the higher of the AMT or the fixed dollar minimum.<sup>2</sup> The purpose for using the credit against the regular tax is to prevent double taxation, under the minimum tax and the regular tax, that might otherwise arise because of the inclusion of timing items of tax preference and adjustment in both bases, but in different years.

For tax years prior to 1994, the allowable credit equaled the excess of the post-1989 adjusted minimum tax imposed over the amount of minimum tax credit allowable for all prior taxable years. To determine adjusted minimum tax for any taxable year, taxpayers were required to re-compute alternative minimum taxable income as if the only adjustments taken into account were the federal tax preference items relating to depletion and appreciated property charitable deductions. The New York alternative net operating loss deduction (ANOLD) was disallowed in the computation of the credit. The difference between the regular AMT computation and the modified AMT computation is, therefore, only the following adjustment and preference items.

• Depreciation of tangible property placed in service after 1986

- Amortization of mining exploration and development costs paid or incurred after 1986
- Amortization of circulation expenditures paid or incurred after 1986
- Basis adjustments in determining gain or loss from sale or exchange of property
- Long term contracts entered into after 2/28/86
- Installment sales of certain property
- Merchant marine capital construction funds
- Passive activity loss (closely held and personal service corporations only)
- Intangible drilling costs

Taxpayers whose AMT base did not include any of the above items would not generate an AMT credit.

The State's AMT credit computation for 1990-1993 did not allow taxpayers the benefit of net operating losses (NOLs) carried forward from prior years or carried back from subsequent years. This has been modified for years beginning 1994 and thereafter. Taxpayers may adjust their AMT credit to include any additional credit resulting solely from the disallowance of NOLDs in the AMT computation during the period 1990 through 1993 (i.e., the pre-1994 NOL component). No more than 20 percent of the pre-1994 NOL component is allowable annually in the five year period 1994-1998. Any pre-1994 NOL component credit not used under this 20 percent constraint is allowable in full after 1998.

Page 4 1994 Art. 9-A Tax Credits

### Analysis of the AMT Credit

Table 1 shows data relating to the number of taxpayers and the amount of AMT credit used by tax base. The data span the period from 1992-1994.

Table 1 shows a significant increase in the amount of AMT credit used from 1993 to 1994. The number of taxpayers also increased during this time. Overall, the total number of taxpayers between 1993 and 1994 more than doubled. The data confirm that the 1994 tax law changes to the AMT credit calculation, especially with respect to the allowance of pre-1994 NOLs, have had a positive effect on credit usage. The positive effect is enhanced because the credit reflects the portion of current NOLs that were disallowed under the AMT.<sup>3</sup>

Table 1: Profile of AMT Cr	redits Used by Bas	sis of Taxation - 19	992-1994 Liab	ility Years		
	1993	2	199	93	19	94
Basis of Taxation	Number of Taxpayers	Amount of AMT Credit Used	Number of Taxpayers	Amount of AMT Credit Used	Number of Taxpayers	Amount of AMT Credit Used
Entire Net Income	185	\$2,051,905	289	\$1,136,843	571	\$3,226,330
Fixed Dollar Minimum Tax	d	d	28	37,404	86	176,345
Capital Base	6	12,723	16	9,782	17	28,358
Alternative Minimum Tax	66	432,421	103	357,494	294	2,506,458
Total	258	\$2,497,103	436	\$1,541,523	968	\$5,937,491

Note: "d" means disclosure is not possible due to confidentiality.

Table 2 illustrates the small number of taxpayers who used the AMT credit compared to total AMT filers, as well as the insignificant amount of credit used in contrast to the total amount of AMT tax paid. At its highest peak in 1994, the number of taxpayers who used the AMT credit represented only 0.06 percent of the total number of AMT taxpayers. In 1994, the amount of AMT credit used represented only 0.03 percent of total AMT tax paid.

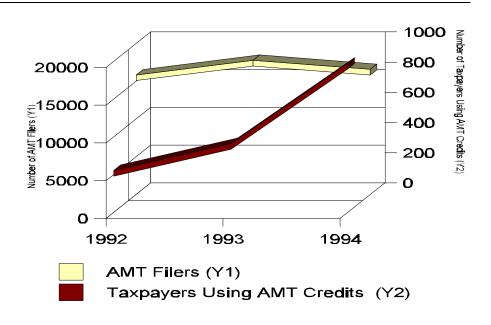

Table 2: Profile of Taxpayers Using AMT Credit vs. AMT Filers and Credit Used vs. Tax Paid

Year	Number of Taxpayers Using AMT Credit	Number of AMT Taxpayers	Amount of AMT Credit Used	Amount of AMT Tax Paid
1992	258	15,462	\$2,497,103	\$238,500,503
1993	436	17,398	\$1,541,523	\$252,065,505
1994	968	16,188	\$5,937,491	\$203,348,932

The tax law changes to the AMT in 1994, such as the double weighting of receipts, reduced the total number of AMT filers. From 1993 to 1994, the total number of AMT taxpayers fell by 1,210, from 17,398 to 16,188. The effect of the AMT changes was not as dramatic as expected due to the recoupling of New York law to federal depreciation rules with respect to property placed in service outside the state by New York taxpayers, beginning in 1994. This federal conformity, while beneficial for taxpayers paying under the regular tax, served to increase the number of AMT filers.<sup>4</sup>

Figure 1 shows the effects of the 1994 tax law changes on the AMT and the AMT credit calculation. The most significant effect was the increase in the number of taxpayers who used credits from 1993 to 1994. The AMT filer numbers show that, while still high, there was a slight decline from 1993 to 1994.

Figure 1: AMT Filers vs. Taxpayers Using AMT Credits - 1992-1994

Page 6 1994 Art. 9-A Tax Credits

Figure 2 illustrates that the dollar amount of AMT credits used increased dramatically from 1993 to 1994. This complements Figure 1 in which the number of taxpayers who used AMT credits increased as well. Similarly, as the number of AMT filers decreased, the amount of AMT paid decreased.

Figure 2: AMT Paid vs. AMT Credit Used - 1992-1994

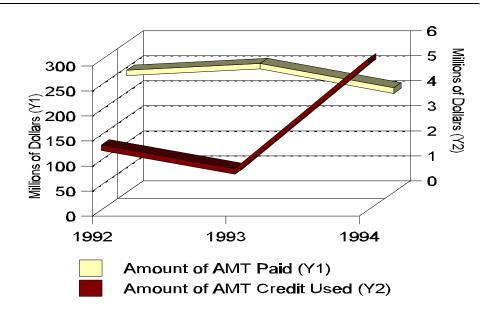

Table 3 presents historical data on the number of taxpayers and AMT credit used by major industry group. From 1992 to 1994, the services industry represented the majority of taxpayers who used the AMT credit, while the agricultural and mining industries continued to have little, if any, credit usage. The finance, insurance and real estate (FIRE) sector had, to a significant extent, the greatest amount of credit used over the same time period. Table 3 shows that, in 1994, the FIRE sector used \$2.7 million in AMT credits, compared to the services sector, which used only \$764,627 in credits.

	1992		1993	3	1994	
Major Industry Group	Number of Taxpayers	Amount of Credit Used	Number of Taxpayers	Amount of Credit Used	Number of Taxpayers	Amount of Credit Used
Unidentifiable	15	\$20,478	7	\$2,602	29	\$7,600
Agriculture	0	0	d	d	d	d
Mining	0	0	d	d	d	d

Total	258	\$2,497,103	436	\$1,541,523	968	\$5,937,491

Note: "d" means disclosure is not possible due to confidentiality.

Page 8 1994 Art. 9-A Tax Credits

#### **Endnotes**

- 1. The credit equals a portion of the AMT that is attributable to certain adjustments and preference items. See New York State Department of Taxation and Finance, Office of Tax Policy Analysis, New York State Fiscal Year 1994-95 Budget: Summary of Tax Provisions (June 1994) for a more detailed description of tax law changes affecting the alternative minimum tax. See also New York State Department of Taxation and Finance Technical Services Bureau Memorandum 94(5) C "Computation of Minimum Taxable Income and Minimum Tax Credit" (January 3, 1995) for further information.
- 2.A technical amendment by Chapter 170 of the Laws of 1994 prevents the use of the minimum tax credit against the tax on subsidiary capital for tax years beginning after 1993.
- 3.Beginning in 1994, the ANOLD may not exceed 45 percent of the minimum taxable income for the year. In calculating the AMT credit, taxpayers are not required to add back any NOLD. This results in a more generous credit amount.
- 4.Taxpayers paying under the entire net income base are not required to add back depreciation amounts taken at the federal level in computing federal taxable income--the starting point for computation of the corporation franchise tax. In contrast, depreciation of property is an adjustment to be added back in computation of the AMT.

Page 10 1994 Art. 9-A Tax Credits

## Analysis of Statistical Data

#### Description of Tables

The following tables present information for the corporate tax credits.

The tables present data on the number of taxpayers taking the credit, the total amount of credit, the average (mean) amount of credit and the median amount of credit, <sup>1</sup> for the following components of each credit: <sup>2</sup>

Credit Earned - The amount of credit generated in the

current tax year.

Credit Claimed - The amount of credit which the taxpayer is

entitled to use during the taxable year, including credit carried forward from prior

years.

Credit Used - The amount of credit which the taxpayer

actually used to reduce tax liability.<sup>3</sup>

Credit Carried Forward - Any unused amount of credit which is

allowed to be used to offset tax liability in

future years.

A series of tables presents a profile of the credit(s) distributed by a different subgrouping. The subgroupings include: basis of taxation after credits, major industry group, size of entire net income, and size of credit used. Due to secrecy provisions, all subgroupings are not provided for all credits, and the tables do not present detailed information about refundable credits.

The major industry group category is based on Standard Industrial Classification Codes (SICs). The Internal Revenue Service asks taxpayers to identify their principal business activity using SIC codes on their tax returns. These codes identify the general type of business activity in which the entity is engaged. The major industry groups presented in this report consist of agriculture; mining; construction; manufacturing; transportation, communications, public utilities' services; wholesale trade; retail trade; finance, insurance and real estate; and services. Taxpayers who fail to provide SIC information, or who may

report outdated codes, become unidentifiable by industry group and are classified as such in this report.

Historical data presented in this report may differ from that presented in previous reports. This can occur as a result of changes made to the data collection process for this report and minor adjustments made to the original data files.

#### **Data Considerations**

The data contained in these tables come directly from the returns of corporations claiming credits.

Taxpayers permitted to take the investment tax credit (ITC) and the employment incentive credit (EIC) report the amounts of these credits earned during the tax year on separate lines on tax form CT-46. However, when computing the credit claimed, used and carried forward, taxpayers combine the ITC and EIC on the CT-46. This study presents these combined amounts for each of the credit components.

## Summary of Credit Activity

The following table summarizes tax credit activity by component and type of credit. The totals in the summary table may not match the detail tables due to rounding and disclosure requirements. This table also provides information on recaptured and refundable credits.

In all of the tables, "-" indicates that the component does not apply to the credit or that the data for that component are not available. The letter 'd' indicates that the data can not be presented due to confidentiality restrictions of the tax law. However, total values for number of taxpayers, amount of credit and mean and median credit were computed using all taxpayers in the study. The available data for all tables do not reflect changes made on audit or as the result of amended filings.

Note: "-" means that the component does not apply to the credit or that the data for that credit are not available.

## Overview of Major Credit Provisions

This section provides an overview of credit provisions effective for tax years beginning prior to January 1, 1995. These credits are discussed in more detail in Appendix A. Appendix B describes changes to the tax law effective for tax years beginning on or after January 1, 1995. Appendix C contains the legislative mandate for the report.

Investment Tax Credit

The rate for the investment tax credit (ITC) equals 5 percent of the first \$350 million of investments, and 4 percent for investments over that amount.

Employment Incentive Credit

Taxpayers allowed an ITC may be eligible for the EIC. This credit is a two-year credit determined by the original investment credit base. The rate equals 1.5 percent if employment equals at least 101 percent, but less than 102 percent of base year employment. The rate equals 2 percent if

employment equals at least 102 percent, but less than 103 percent of base year employment. The rate equals 2.5 percent if employment equals at least 103 percent of base year employment.

Credit on Research and Development Property Under the Investment Tax Credit Research and development property (R&D) qualifies for the ITC. Taxpayers may either choose the R&D rate of 9 percent or the lower ITC rate. By electing the lower rate, taxpayers also become eligible for the EIC in subsequent years based on increased employment. (Because of the consolidation of these credits on the tax return, separate data on the amount of research and development credit under the ITC do not appear in this report.)

Pre-1987 Research and Development Tax Credit

An unused research and development tax credit may be carried forward to any tax year beginning before January 1, 1994. None of this credit was used in 1993.

Economic Development Zone Credits

These credits include an investment tax credit, a wage credit (for wages paid to targeted and non-targeted employees in such zones), and a capital corporation tax credit (for the purchase of original issue stock issued by a certified economic development zone capital corporation).

Alternative Minimum Tax Credit

In certain instances, taxpayers could be subject to double taxation on the same transaction under the regular tax system and the alternative minimum tax (AMT). To eliminate this double-tax result, the law provides a credit mechanism. The AMT credit equals the taxpayer's adjusted minimum tax, minus any amount used as a minimum tax credit in prior years. (For a complete explanation, see Appendix A.)

Page 14 1994 Art. 9-A Tax Credits

#### **Endnotes**

- 1.As used in this report, "Mean Amount of Credit" is defined as the average amount of credit in a given category. "Median Amount of Credit" is defined as the central value representing an equal number of credit values below and above it.
- 2. There is only data available for the "credit used" component for the Job Incentive Credit and the Alternative Minimum Tax Credit.
- 3.Taxpayers may use credits to reduce their tax liabilities computed under the entire net income base, capital base or subsidiary capital base. However, credits may not be used to reduce tax liability below the amount computed under the alternative minimum tax base or the fixed dollar minimum base, whichever is higher.

#### Table 5: Profile of Total New York State Credits

## Credits Earned by Year and Credit

	19	993	1994		
Credit	Number of Taxpayers	Amount of Credit Earned	Number of Taxpayers	Amount of Credit Earned

Page 30 1994 Art. 9-A Tax Credits

# Appendix A: Credit Provisions Effective for Tax Years Beginning Prior to January 1, 1995

#### Investment Tax Credit

For tax years beginning on or after December 31, 1968, the investment tax credit (ITC) equaled 1 percent of the cost of new or expanded manufacturing production facilities located in New York State. By 1982, the rate had grown to 6 percent.

For tax years beginning in 1987, 1988 and 1989, the rate dropped to 5 percent of the first \$500 million of investments, and 4 percent for investments over that amount. For tax years beginning in 1990, the \$500 million threshold dropped to \$425 million and then to \$350 million for subsequent tax years.

In addition, taxpayers who met certain employment tests could qualify for the employment incentive credit (EIC). Prior to 1987, this credit equaled one-half of the investment credit. It was available for up to three years following the tax year in which the taxpayer earned the ITC. However, employment in such years must have equaled at least 101 percent of the employment in the year immediately before the ITC was first claimed.<sup>1</sup>

For investments made on or after January 1, 1987, the EIC is a two-year credit described in the following table:

History of Tax Rates of the Employment Incentive Credit	Year Property is Placed in Service	Average Number of Employees During the Tax Year Expressed as a Percentage of those in the Employment Base Year	Additional Credit as a Percentage of the Investment Credit Base		
	Tax Years Beginning in 1987, 1988 or 1989	At least 101%	2% of the first \$500 million 2.5% in excess of \$500 million		
	Tax Years Beginning in 1990	At least 101%, but less than 101.5%	2% of the applicable ITC base		
		In excess of 101.5%	2.5% of the applicable ITC base		
	Tax Years Beginning After	At least 101%, but less than 102%	1.5% of the applicable ITC base		
	1990	At least 102%, but less than 103%	2% of the applicable ITC base		
		At least 103%	2.5% of the applicable ITC base		
Research and Development Tax Credit	development tax Tax Law was co separate credit h forward to any t	ginning on or after January 1, a credit previously allowed unconsolidated into the ITC provis as been repealed, any unused ax year beginning before January evelopment property acquired.	der section 210.18 of the sions. Although the credit may be carried ary 1, 1994. <sup>2</sup>		
Credit for Research and Development Property Under the ITC	Research and development property acquired on or after January 1, 1987 qualifies for the ITC. Taxpayers may elect the regular ITC rate including the EIC, or an optional rate on R&D property of 9 percent for taxable years beginning in 1990. If taxpayers elect the higher rate, they cannot claim the EIC on the same investment.				
Special Additional Mortgage Recording Tax Credit	A credit is allowed equal to the State special additional mortgage recording tax paid on mortgages recorded after December 31, 1978. The special additional mortgage recording tax is imposed at the rate of 25 cents per \$100 on the indebtedness secured by a mortgage recorded on after July 1, 1969. A tax credit is not allowed for the special additional mortgage recording tax paid on residential mortgages recorded after May 1, 1987, where the real property is located in Erie County or one or more of the counties comprising the Metropolitan Commuter Transportation District. <sup>3</sup>				

Page A-2 1994 Art. 9-A Tax Credits

#### Job Incentive (Eligible Business Facility) Credit

Enacted in 1968, the job incentive credit applied to manufacturing and wholesaling firms. To claim the credit, the firm must have located, expanded or improved their facilities in core areas of the State's six largest cities. They must also have provided employment and training to residents of these areas. Subsequent legislation expanded the program to cover all of New York State. Legislation enacted in 1983 terminated the program. However, applications approved before July 1, 1983 continued in effect. This credit sunsets for tax years beginning on or after January 1, 2000.

The amount of credit equaled a percentage, based on eligible wages and property in the core area, applied to liability. A taxpayer could not have claimed both the job incentive credit and another credit for the same investment.

## Economic Development Zone (EDZ) Credits

In 1986, New York State enacted legislation to stimulate growth in economically distressed communities. The program provides a package of tax incentives for businesses that invest or provide jobs in designated economic development zones (EDZs). Credits available to Article 9-A taxpayers include the wage credit, the capital corporations credit, and an investment tax credit.

#### **EDZ Wage Credit**

Eligible taxpayers may claim a wage tax credit for up to five years for doing business and creating jobs in an EDZ. The credit differs for targeted and nontargeted employees. A higher credit rate applies to wages paid to targeted employees (i.e., those with low incomes or on public assistance).

The credit equals 25 percent of targeted eligible wages for the first tax year, declining by 5 percent per year for each of the following five years. The corresponding credit for non-targeted employees equals one-half of these amounts. The total credit cannot exceed 50 percent of tax due.

To qualify for the credit, taxpayers must fill 20 percent of new zone jobs with zone residents, or with residents of census tracts bordering the EDZ. In addition, the employer must show a statewide and zonewide net employment gain. Ceilings limit the credits.

## EDZ Investment Tax Credit

Production property acquired or built in an EDZ may qualify for an ITC of 10 percent. Like the regular ITC and other credits, this credit cannot reduce the tax due for any year to less than the higher of the tax on the minimum income base or the fixed dollar minimum. However, unlike other credits, corporations may carry forward any unused EDZ-ITC indefinitely.

An additional 3 percent credit rate (30 percent of the ITC) applies in the three years following the year in which the corporation claimed the ITC. To qualify for this second credit, the taxpayer's employment in the EDZ (excluding general executive officers) must equal at least 101 percent of the average employment in the year prior to earning the ITC.

## EDZ Capital Corporation Tax Credit

Under the corporation franchise tax a credit may apply to the consideration paid for original issue stock purchased from an economic development zone capital corporation. These are corporations designed to raise money for investment in zone businesses. The credit equals 25 percent of the amount paid for the stock, up to a lifetime maximum of \$100,000. In any tax year, the credit cannot exceed 50 percent of the taxpayer's pre-credit liability. Taxpayers may carry forward unused amounts indefinitely. A recapture provision applies if the taxpayer disposes of the investment that provided the basis of the credit within 36 months of acquisition.

# Alternative Minimum Tax Credit

Taxpayers began to accumulate the alternative minimum tax (AMT) credit in 1990. Beginning in 1991, taxpayers can claim the AMT credit against their regular tax (entire net income base) for a portion of AMT paid in 1990 and subsequent years. A taxpayer could use the AMT credit to reduce their regular tax liability to the fixed dollar minimum or the minimum taxable income base, whichever was higher.

The calculation of the minimum tax credit involves a two-step process. The taxpayer calculates a "tentative" minimum tax by subtracting from the minimum tax the highest of the tax on entire net income, the tax on business and investment capital or the fixed dollar minimum tax. In the second step, corporations recalculate the minimum tax they would have paid, accounting for only two specific tax preferences. The first is the preference related to depletion under IRC Section 57(a)(1). The second is the preference related to the appreciated property charitable deduction under IRC Section 57(a)(6)(b). Prior to 1994, both minimum tax calculations disallow the NOL deduction, and require single weighting of the receipts factor. Corporations reduce this recalculated minimum tax by the highest of the tax on entire net income, the tax on business and investment capital or the fixed dollar minimum tax. The result of subtracting the recalculated minimum tax credit from the "tentative" minimum tax credit equals the minimum tax credit available for subsequent years.

#### Fixed Dollar Minimum Tax

New York's corporate franchise tax law currently imposes a fixed dollar minimum tax, which varies according to a taxpayer's gross payroll.

Page A-4 1994 Art. 9-A Tax Credits

Gross Payroll Amount	Fixed Dollar Amount
\$6,250,000 or more	\$1,500
\$1,000,001 to \$6,250,000	\$ 425
\$1,000,000 or less	\$ 325

A fixed dollar minimum of \$800 applies to essentially inactive (i.e., shell) corporations that meet certain conditions, including:

- gross payroll of \$1,000 or less;
- total gross (i.e., everywhere) receipts of \$1,000 or less; and
- gross assets with an average value of \$1,000 or less.

### Changes in 1994-95 State Budgets

The 1994-1995 State Budget made significant changes to certain corporate tax credit provisions. The highlights include:<sup>4</sup>

- Investment Tax Credit and Employment Incentive Credit. For credits generated on or after January 1, 1987, the allowable credits carry forward period increases from 7 to 10 years. (This extension did not, however, apply to pre-1987 research and development credit.)
- Alternative Minimum Tax Credit. See above description.
- Zone Equivalent Area Wage Credit. See above description.

# Changes in EDZ Program

In 1993 and 1994, New York State expanded and modified the economic development zone (EDZ) program. In 1993, the changes included simplifying the wage tax credit and the capital corporation credit. The computation of the wage tax credit was changed from a complex percentage of wages method to a flat dollar amount per newly hired employee. This change and the expansion of the capital corporation credit were intended to increase participation in the program.

In 1994, the program was expanded to also provide a wage tax credit for businesses that increased employment in areas eligible for EDZ designation. These areas are called zone equivalent areas (ZEAs).

The changes to the EDZ credits that were enacted in 1993 and 1994 were effective for tax years beginning on or after January 1, 1994.

## EDZ and ZEA Wage Credits

Beginning on or after January 1, 1994, the wage credit was simplified. The EDZ wage credit is now based on the average number of newly hired

1994 Art. 9-A Tax Credits Page A-5

employees. The first component of the credit equals the product of the average number of newly hired targeted EDZ employees multiplied by \$1,500. The corresponding credit amount for other employees equals the product of the average number of newly hired nontargeted EDZ employees receiving EDZ wages multiplied by \$750.

For tax years beginning on or after January 1, 1994, a similar credit is provided for eligible businesses located in ZEAs. Taxpayers employing individuals in ZEAs may claim a two-year wage tax credit for EDZ wages paid to full-time employees in a ZEA. In year one, the credit equals \$1,000 multiplied by the average number of newly hired targeted employees and \$500 multiplied by the average number of newly hired nontargeted employees. In year two, the credit decreases to \$500 per targeted employee and \$250 per nontargeted employee.

The total EDZ or ZEA wage tax credit cannot exceed 50 percent of tax due (before credits). Taxpayers may carry forward unused credits indefinitely. In lieu of a carryforward, "new business" taxpayers may elect to have unused credit refunded.

EDZ Investment Tax Credit (EDZ-ITC)

Effective January 1, 1994, the EDZ-ITC was amended to allow new businesses to elect a refund of the unused credit in lieu of a carryforward. Remaining provisions of the EDZ-ITC did not change.

EDZ Capital Corporation Credit

For tax years beginning on or after January 1, 1994, the law was amended to allow the EDZ capital credit for investments in capital corporations, direct equity investments in certified zone businesses, and contributions to community development projects. The new credit equals 25 percent of the sum of each type of investment. The lifetime maximum credit per taxpayer equals \$300,000.

Changes in Special Additional Mortgage Recording Tax Credit For periods beginning on or after 1994, taxpayers may elect to treat the unused portion of the special additional mortgage recording tax credit as an overpayment to be credited or refunded.

Changes in Alternative Minimum Tax Credit Effective for taxable years beginning in 1994, taxpayers are permitted an alternative minimum tax (AMT) credit against regular (ENI-based) tax liability for part of the net operating loss deduction not used in computing the AMT. Taxpayers may calculate the AMT credit retroactively for taxable years after 1989 and carry forward the credit indefinitely. The pre-1994 net operating loss component is subject to a five-year transition rule, beginning in taxable years after 1993 and ending before 1999. Under the transition rule, a taxpayer may use up to 20 percent of the

Page A-6 1994 Art. 9-A Tax Credits

credit in each of the five years beginning with the 1994 tax year. The taxpayer will have available the remainder of any unused credit for tax years after 1999.

1994 Art. 9-A Tax Credits Page A-7

## **Endnotes**

- 1.Effective for credits generated on or after January 1, 1987, the allowable carry forward of the investment tax credit and employment incentive credit increased from 7 to 10 years. The cutoff of pre-1987 investment tax credit carry forwards was extended from 1994 to 1997.
- 2.The research and development credit carry forward under section 210.18, which applied to any tax year beginning before January 1, 1994, was not, in contrast to the investment tax credit research and development property credit carry forward, extended to 1997 under legislation enacted in 1994.
- 3. Taxpayers may request a refund of special additional mortgage recording tax credit earned after January 1, 1994.
- 4.See New York State Department of Taxation and Finance, Office of Tax Policy Analysis, New York State Fiscal Year 1994-95 Budget: Summary of Tax Provisions (June 1994) for more details on changes to credit provisions.

# Appendix B: Highlights of Changes Effective for Tax Years Beginning On or After January 1, 1995

### Changes in 1995-96 State Budget

The 1995-1996 Budget contained no changes to existing corporate tax credit provisions.

### Changes in 1996-97 State Budget

The 1996-97 State Budget contained two significant tax law changes affecting corporate tax credit provisions. These included the following:<sup>1</sup>

• Credit for Rehabilitation of Historic Barns

Effective for taxable years beginning on or after January 1, 1997, the investment tax credit (ITC) was expanded to allow a corporate franchise tax credit for the rehabilitation of historic barns in New York State.

The credit equals 25 percent of qualified rehabilitation expenditures paid or incurred for any barn located in New York State that is a qualified rehabilitated building. The definition of a qualified rehabilitated building has the same meaning as a "qualified rehabilitated building" for purposes of the federal rehabilitation credit under section 47 of the Internal Revenue Code. For purposes of the historic barn credit, a barn is defined as a building originally designed and used for storing farm equipment or agricultural products or for housing livestock, but does not include barns converted to residential purposes. In accordance with federal law for rehabilitation of historic buildings, the barn being rehabilitated must have been placed in service before the commencement of the rehabilitation work, and it either must be a certified historic structure or must have been first placed in service before 1936. It only qualifies for the credit based on substantial rehabilitation. Generally, a building will have been considered substantially rehabilitated only if the expenditures exceed the greater of the adjusted basis of the barn or \$5,000. A taxpayer may not claim both the regular investment tax credit on manufacturing property and the investment tax credit for rehabilitation of historic barns on the same property.

#### • Agricultural Property Tax Credit

Effective for taxable years beginning in 1997, eligible farmers may claim a real property tax credit against the corporate franchise tax. The credit is available to an eligible farmer defined as a taxpayer whose gross income from farming is at least 2/3 of total gross income. The credit equals the total school district property taxes paid on qualified agricultural property in the State up to the acreage limitation, and 50 percent of the school taxes paid on acres in excess of the limitation. The acreage limitation equals 100 acres in 1997, 175 acres in 1998, and 250 acres after 1998. The credit is phased out for taxpayers with New York adjusted gross income (entire net income) in excess of \$100,000. Recapture provisions require an addback of the credit if the taxpayer converts the property to a nonqualified use in the 2 years subsequent to the first year of the credit.

### Changes in 1997-98 State Budget

The 1997-98 State Budget expanded existing credit provisions and also contained a new tax credit for alternative fuel vehicles and alternative fuel refueling property.<sup>2</sup>

#### • Investment Tax Credit Carryforward

The 1997-98 Budget extended the investment tax credit carryforward period from ten to 15 years. Any unused pre-1987 credits will now be available until 2002 to provide relief for businesses. Post-1986 credits will have a 15-year carryforward.

#### • Alternative Fuels Vehicle Credit

Corporate franchise taxpayers may claim credits for electric vehicles; clean fuel vehicles using natural gas, methanol and other alternative fuels; and clean fuel refueling facility property. The tax credits are available for property placed in service in taxable years beginning on or after January 1, 1998 and before 2003. The credits may be transferred to Article 9-A affiliates.

The tax credits equal 50 percent of the incremental cost of new electric vehicles registered in New York (capped at \$5,000 per vehicle); 60 percent of the cost of new clean-fuel components for alternative fuel vehicles registered in New York (capped at \$5,000 per vehicle with a gross vehicle weight rating of 14,000 pounds or less, and \$10,000 for those over 14,000 pounds); and 50 percent of the cost of new clean-fuel refueling property used in a trade or business.

Page B-2 1994 Art. 9-A Tax Credits

#### Agricultural Property Tax Credit

The 1997-98 Budget amended the farm school property tax credit for tax years beginning on or after January 1, 1998. For corporations, excess federal gross income for determination of the 2/3 farming income test equals federal gross income from all sources in excess of \$30,000.

The income limitation which phases out the credit was modified such that payments on principal on farm indebtedness may be subtracted from New York State entire net income in order to calculate the income limitation.

The changes clarified that gross income from production of maple syrup, or cider, or sale of wine from a licensed farm winery, shall be included in "federal gross income from farming" for purposes of determining the 2/3 farming income test.

# Chapter 142 of the Laws of 1997

Credit for Employers Who Hire Persons With Disabilities

Chapter 142 of the Laws of 1997 created a new tax credit for employers who hire individuals with disabilities.

The credit equals 35 percent of the first \$6,000 of first year wages paid to the disabled employee (a maximum of \$2,100 per employee). However, if the first year wages qualify for the federal work opportunity tax credit, the New York credit will apply to second year wages. The federal tax credit was extended to July 1, 1998.

To become eligible for the State credit, an employee must work for the employer on a full time basis for at least 180 days or 400 hours, and must be certified as disabled by the State Education Department. Visually handicapped employees may receive certification from the appropriate agency responsible for vocational rehabilitation of the blind and visually impaired.

The credit becomes effective for tax years beginning on or after January 1, 1998, with respect to employees who begin work on or after January 1, 1997. Unused credits are not refundable, but they may be carried forward indefinitely.

## Appendix C: Legislative Mandate

Section 109(a) of the Business Tax Reform and Rate Reduction Act of 1987 (Chapter 817 of the Laws of 1987) requires the Commissioner of Taxation and Finance to conduct a study regarding corporate tax credits. The legislative mandate follows.

On or before December first, nineteen hundred eighty-eight and on or before December first of each year thereafter, the commissioner of taxation and finance shall submit a written report and such data and supporting documentation as are available and meaningful regarding the number of taxpayers claiming, using, and carrying forward tax credits and the total amount of such credits claimed, used, and carried forward and the median, mean and distribution of such credits for taxable years beginning during nineteen hundred eighty-four, and each subsequent year, to the extent that such information is available. Such reports shall present the latest information available reflecting amended returns filed by taxpayers and adjustments upon audit by taxpayer liability period as well as the impact of such credits upon state fiscal year revenues.

Copies of these reports shall be submitted by the commissioner of taxation and finance to the governor, the temporary president of the senate, the speaker of the assembly, the chairman of the senate finance committee and the chairman of the assembly ways and means committee. Such reports shall contain, but need not be limited to, information by industrial classification, by basis of taxation, by size of credit and taxpayer income ranges. In preparing such reports, the commissioner of taxation and finance shall ensure that the statistics are classified in a manner consistent with the secrecy requirements of tax law.
