Introduction

	This report provides a statistical profile of estate tax returns processed by the Department of Taxation and Finance between April 1, 1996 and March 31, 1997. During this period, the Department processed approximately 29,100 Form ET-90 returns, 18,700 of which had a tax liability and 10,400 of which did not. In addition to cataloging data contained on tax returns, in certain cases the Department made adjustments to correct for mathematical and other errors. This study provides information on types and amounts of 1) assets, 2) deductions, 3) credits, and 4) tax liability. It also provides distributional detail on these items. Most of the tables classify estates by size of New York gross estate. Appendix A contains a glossary of key terms contained in this report.
Description of Tax	New York imposes a unified estate and gift tax that, for the most part, conforms to the federal unified estate and gift tax. Where conformity applies, references are to the Internal Revenue Code as amended through November 5, 1990. Gifts made after 1982 are taxed using the tax rates applicable to total accumulated gifts. A credit applies for tax previously paid or payable on these gifts. As a result, persons making gifts over many years are subject to increasingly higher graduated tax rates.
	New York taxes the estate, plus the sum of all taxable gifts, and allows a credit for previous gift tax paid. This credit ensures that no double taxation occurs. The unified system effectively imposes a greater amount of total tax on two estates of the same size in cases where one estate has a higher amount of prior lifetime gifts than the other.
	Since 1983, New York has followed the federal treatment that provides a full exclusion for transfers to spouses. New York also follows the federal provisions relating to special valuation of certain farm and closely-held business property, and for deferral of tax on such property.

Tax is computed using New York State Estate Tax Return, Form ET-90. Appendix B contains a copy of this form. The computation of estate tax begins with federal gross estate, which includes both New York assets and nontaxable, non-New York assets. Federal deductions for such items as spousal transfers, bequests to charities, decedents' debts, and death expenses, are permitted in determining the taxable estate.

In addition, a State deduction for up to \$250,000 of the decedent's principal residence applies. This provision took effect for estates of individuals who died after June 7, 1995. Therefore, while it applies to most estate tax returns contained in this study, estates of decedents who died prior to June 8, 1995, were not able to use this deduction.

After computing the taxable New York estate, adding adjusted taxable gifts results in preliminary tentative tax base. The taxpayer then computes a tentative tax, using a tax rate schedule ranging from 2 percent on the first \$50,000 to 21 percent on taxable amounts in excess of \$10.1 million. The unified credit of as much as \$2,950 is then subtracted. This credit serves to exempt estates plus taxable gifts of under \$115,000 from tax. The credit phases down dollar-for-dollar with tax liability, to a \$500 minimum. The result, net preliminary tentative tax, is then multiplied by a percentage equal to the ratio of New York property to total property. This ensures that no tax is imposed on non-New York real and tangible property, or on nonresident decedents' intangible property.

The above computation results in tentative tax. Certain credits against tentative tax then apply. These include credits for:

- gift tax paid or payable on post-1982 gifts,
- agricultural exemption,
- certain closely held business property,
- estate tax on prior transfers, and
- gift tax paid on pre-1983 gifts.

After subtraction of available credits, New York net estate tax results, unless the minimum tax is higher. New York uses the federal credit for state death taxes as a minimum tax. If tax liability is less than the credit,

	then the credit becomes the tax liability. Failure to maintain the credit as a minimum tax would effectively increase the estate's federal tax liability. This is because the federal credit for state death taxes equals the <i>greater</i> of an amount prescribed by a rate schedule, or tax actually paid. Using the federal death tax credit as a minimum tax, therefore, minimizes the estate's federal tax. As for federal purposes, the estate tax return, Form ET-90, is due within
	nine months of the decedent's death. However, to avoid interest, 90 percent of the tax is due within six months. For this reason, many returns are also filed within six months, despite the nine-month due date.
Recent Law Changes	Legislation enacted in 1994 increased the maximum unified credit from \$2,750 to \$2,950, thereby increasing the exemption equivalent from \$108,333 to \$115,000. This legislation also provided a new credit equal to 5 percent of the first \$15 million of assets in a closely-held business. This maximum credit of \$750,000 reduces the tax burden on the transfer of small businesses to heirs upon an owner's death. In effect, small businesses valued at less than \$600,000 do not create an estate tax liability.
	As noted earlier, legislation adopted in 1995 provides a new deduction equal to a maximum of \$250,000 of assets representing equity in the decedent's principal residence. By reducing the tax on such assets, it facilitates the transfer of homes from decedents to their heirs. The principal residence deduction, combined with the unified credit, allows up to \$365,000 of this property to be exempt from tax, and reduced liabilities on 1996-97 returns by approximately \$60 million.
1997 Estate & Gift Tax Reduction Program	A significant estate tax reduction program was enacted in August 1997 as part of the State's 1997-98 budget legislation. As a first step, the unified credit will increase to a maximum of \$10,000 on October 1, 1998, increasing the exemption equivalent from \$115,000 to \$300,000. When the legislation becomes fully effective on February 1, 2000, it will reduce the estate tax to what is commonly termed a "pickup" or "sop" tax equal to the maximum federal credit for state death taxes. This is the minimum state death tax possible, and already applies in 33 other states. Overall, when fully effective, the legislation will reduce estate tax liabilities by an average of nearly 40 percent, and eliminate tax for about 85 percent of estates subject to tax prior to the law change. (In addition, the gift tax,

	which only four other states imposed as of January 1, 1998, will be repealed as of January 1, 2000.)
Description of Data in This Study	The information in this study comes from all estate tax returns which the Department processed during the 1996-97 New York State fiscal year. This includes some returns that will eventually be adjusted, either upon audit or due to additional verification procedures used by the Department. However, only a small share of processed returns will eventually have a different tax liability than that initially reported on the return.
	This study includes returns that were taxed under different years of tax provisions. In fact, about 6 percent of all returns relate to decedents who died before 1994. Therefore, users of this study should use caution in attempting to relate data to a particular estate tax law.
	In addition, although this study covers returns processed between April 1, 1996 and March 31, 1997, these returns do not reflect actual net fiscal year 1997 estate tax collections of \$792 million. Estate tax collections reflect payments received from several different years of Tax Law, and from several different years of decedents' death. For example, a significant amount of fiscal year 1997 estate tax payments came from estates that did not yet file a tax return as of the end of the 1997 fiscal year. In addition, estate tax collections include both audit revenue paid to the Department and refunds paid by the Department, relating to prior- year tax returns.
	Many estates have taxable gifts upon which gift tax was previously paid. The gift tax is paid annually, and applies to all gifts made during the year, after an annual exclusion of up to \$10,000 per donee. Tax is then computed using the same rates and unified credit applicable for the estate tax. This report includes only estate tax returns, and therefore does not provide gift tax information. However, it does include information for gifts upon which gift tax was previously paid and includible in the decedent's estate.

Tables Contained in This Study	The following tables provide statistical information on estate tax returns processed during the 1996-97 State fiscal year. In addition to overall summary tables, the information is grouped by:
	• decedents' county of residence,
	• estate tax liability,
	• decedents' year of death,
	• size of gross estate,
	• size of net (taxable) estate, and
	• situs (New York and total) of assets.

Appendix A: Glossary of Key Terms

Adjusted Gross Estate	The federal gross estate after certain minor additions and subtractions. It includes assets without a situs in New York.
Form ET-90	The basic estate tax return, with supporting schedules, used by estates of decedents who died after May 25, 1990.
Minimum Tax	The tax computed using the maximum federal credit for state death taxes. If it exceeds otherwise-computed tax, it becomes the estate's tax liability.
Net Estate	Taxable estate (gross estate minus deductions) plus adjusted taxable gifts. This is also known as the preliminary tentative tax base, to which, after adding adjusted taxable gifts, the tax rate schedule is applied.
New York Gross Estate	Federal gross estate minus real and tangible personal property having an actual situs outside New York, plus/minus certain other minor modifications.
Nonresident Estate	The estate of a decedent who at death was not a resident of New York.
Processed Return	A Form ET-90 which the Tax Department has processed and to which it has made minor adjustments, usually to correct math and entry errors. In nearly all cases, the computed liability is final. However, a small portion of processed returns might eventually be subject to audit.
Resident Estate	The estate of a decedent who at death was a resident of New York. Residency is determined by domicile.
Surviving Spouse	Where the decedent has a surviving spouse, all transfers to the spouse are exempt from tax.

Taxable Base	The sum of the adjusted taxable estate plus adjusted taxable gifts. Taxable base is used to determine tax with the tax rate schedule. However, the result, after subtracting the unified credit does not equal tax before credits, because it is then multiplied by the ratio of New York gross estate to New York adjusted gross estate to ensure that non-New York assets are not taxed.
Unified Credit	A credit which offsets tax dollar for dollar and creates an exemption, level below which no tax is due. The credit equals a maximum of \$2,950, and decreases dollar for dollar with tax liability, to a \$500 minimum. This effectively exempts taxable estates of \$115,000 and less from tax.
	Legislation enacted in 1997 increases the unified credit to \$10,000, exempting taxable estates of \$300,000 and less from tax, effective October 1, 1998.
