Statistical Highlights of 1997 Returns

Summary

Tax year 1997 represented the final year of a three-year tax reduction program enacted in 1995. Tax year 1997 represented the final year of a three-year tax reduction program enacted in 1995. By 1997, taxpayers saved over \$4 billion per year, an overall cut of nearly 20 percent from 1994. Most taxpayers saved at least 25 percent. For 1997, the top tax rate decreased and standard deduction amounts increased.

Some highlights from tax year 1997 personal income tax returns include:

- Total federal adjusted gross income (FAGI) of resident taxpayers for 1997 equaled approximately \$338 billion, a significant \$30 billion (9.7 percent) increase from 1996. New York adjusted gross income (NYAGI) totaled \$323 billion, compared to \$295 billion in 1996.
- Total State income tax liability of residents, nonresidents, and partyear residents equaled approximately \$17.25 billion, an increase of 3.9 percent from 1996. Resident taxpayers accounted for just under \$14.8 billion, or 86 percent of total tax.
- Average tax liability per taxable resident return equaled \$2,795, slightly more than the \$2,771 in 1996.
- Demonstrating the impact of the tax reduction legislation, total resident income tax liability, as a percentage of NYAGI, declined from 4.89 percent in 1996 to 4.58 percent in 1997.
- The number of tax returns filed with the Department of Taxation and Finance in 1997 totaled approximately 8.2 million, some 100,000 more than in 1996. About 2.3 million of this total were nontaxable returns. The number of taxable returns rose from 5.8 million to 5.9 million, with resident returns accounting for slightly under 90 percent of this total.

Introduction and Background

This publication contains findings from a study of 1997 personal income tax returns filed during 1998. To aid the reader in interpreting the contents of this report, several key definitions and descriptions appear in Appendix A. It is particularly important to note that the term "taxpayer" means an individual, or married couple filing jointly, who files a return indicating a positive tax liability. By this definition, the terms "taxpayers" and "taxable returns" are interchangeable.

This study contains statistics based on a stratified sample of approximately 118,000 personal income tax returns selected from a total filing population of approximately 8.2 million returns. Both taxable and nontaxable returns were sampled. However, this report primarily provides statistics on 5.9 million resident, part-year resident, and nonresident returns with a New York personal income tax liability. Appendix B details the specific sampling techniques employed in developing this study.

The study contains information required to compute tax liability or tax owed by taxpayers on timely filed returns for the 1997 tax year. The information reflects corrections for computational or minor errors, but does not account for subsequent audits or amendments that may occur after initial processing. Therefore, the data contained in the report do not reflect <u>final</u> 1997 liability for all returns. The concept of tax liability differs from tax collections. Actual tax collections during the State fiscal year (April 1 through March 31) are made up of receipts of various types of payments made to satisfy taxpayers' tax liability including withholding, estimated payments, final payments, refunds, audit payments, and payments from delinquent accounts. Personal income tax collection data are presented in the annual *New York State Tax Collections* statistical report prepared by the Office of Tax Policy Analysis (OTPA).

This report describes the prominent features of New York's personal income tax, with particular emphasis on the 1997 tax year. It also

	includes taxpayer profiles consisting of number of taxable returns, sources of income, federal adjustments, New York modifications, deductions, dependent exemptions, tax liability and credits by NYAGI class, filing status and return type. In addition, it includes separate sections on income, itemized deduction amounts, exemptions, available credits and information on refundable credits. Finally, it compares statistics for 1997 with those from the prior year for most of these items. Appendix D includes the major tax forms which taxpayers filed for tax year 1997.
	The statistical tables accompanying this report cover resident, part-year resident, and nonresident returns. The "Statistical Summary" section focuses on resident returns because the data for nonresidents and part-year residents are not comparable to data from resident returns. Amounts of income, deductions, and credits reported on nonresident and part-year resident returns are not comparable to those amounts on resident returns, because they represent gross amounts before allocation of the base tax to reflect the New York-source portion of total federal gross income. The report also includes a description and statistical information from returns filed by fiduciaries of estates and trusts.
	This year's report marks 50 years of publishing the Department's personal income tax study since the inaugural study was issued for the 1947 tax year. Appendix C includes highlights from "New York State Income Statistics 1947 – An Analysis of New York State Income Tax Returns."
Comparison With Other OTPA Reports	The aggregate statistics reported in this publication do not completely coincide with data presented in the <i>New York Adjusted Gross Income and Tax Liability, Analysis of State Personal Income Tax Returns by Place of Residence (POR)</i> publication also prepared by OTPA. The data provided in this report are based on a statistically valid sample of approximately 118,000 personal income tax returns selected from a population of just under 8.2 million returns. OTPA staff reviewed taxpayer entries, inserted missing data, corrected data and recomputed subtotals. (See Appendix B for a more complete description of the sample.) Using either the number of tax returns, adjusted gross income, or tax liability data for each sample cell, the sample was inflated to represent all timely filed 1997 State personal income tax returns.

In comparison, the *POR* publication tabulates information from all returns filed with the Department of Taxation and Finance (the Department). The *POR* report represents the compilation of records on the Department's master file on a particular day. The data variables represent amounts accepted by the Department's tax return processing system within system tolerances. Analysts compiled the data and reported the statistics with minimal review.

This report covers only some of the information contained on New York State income tax returns. The Office of Tax Policy Analysis also publishes an annual study of county-specific income and tax liability data. In addition, the Office produces special legislatively mandated studies on the earned income tax credit and real property tax credit.

Prominent Features

New York automatically conforms to most federal definitions of income and itemized deductions. Therefore, some of the tables contained in this study refer to federal components of income and federal components of deductions, the starting point for State computations. New York was one of 29 states conforming to the federal Internal Revenue Code in this way in 1997. However, like most of these states, New York modifies federal adjusted gross income for various reasons. These modifications include exemptions for certain pensions and social security, and interest on federal obligations (which federal law precludes states from taxing).

Table 1 highlights the major provisions of New York's 1997 personal income tax law.

Social Security Benefits	Fully Exempt			
Pension Income	New York State and local and federal pensions fully exempt; others eligible for up to \$20,000 exclusion (\$20,000 each spouse for married couples).			
Married Standard Deduction	\$13,000			
Head of Household Standard Deduction	\$10,500			
Single Standard Deduction	\$7,500			
Dependent Filer Standard Deduction	\$3,000			
Itemized Deductions	Federal amount (after limitation*) minus deduction for state and local income tax. Upper-income taxpayers must further reduce itemized deductions by up to 50 percent.			
Dependent Exemption Amount	\$1,000			
Tax Treatment of Married Taxpayers	Joint rate schedule with full income splitting.			
Minimum Tax	Add-on tax equal to 6 percent of certain federal tax preference items, minus deductions of \$5,000 and regular tax.			

* Taxpayers with federal AGI of \$121,200 or more (\$60,600 for married filing separately) must reduce their itemized deductions by 3 percent of the amount by which their AGI exceeds \$121,200 (\$60,600 for married filing separately). The reduction does not apply to deductions for medical expenses, casualty and gambling losses, and investment interest expense, and it cannot reduce deductions subject to the limitation by more than 80 percent.

New York has a graduated rate structure in which tax rates increase as taxable income increases. Table 2 shows the 1997 tax rate schedule. Also, the supplemental tax described in Table 2 causes certain upper-income taxpayers to lose the value of tax rates below the top rate.

Table 1: Selected Provisions of New York State Personal Income Tax

Structure – 1997 Tax Year This effectively means that in 1997 these taxpayers paid a flat tax of 6.85 percent on all of their taxable income. Credits which decline in value as income rises also help make the tax progressive. On the other hand, New York permits most federal itemized deductions, which tend to diminish progressivity. Federal and State limitations on itemized deductions reduce some of this effect.

Table 2: 1997 Tax Rates			Married Joint and Surviving Spouse
	If taxabl	e income is:

			Head of Household
	If taxabl	e income is:	
	Over	But not over	
	\$ 0	\$11,000	4% of taxable income
	11,000	15,000	\$440 plus 4.50% of amount over \$11,000
	15,000	17,000	\$620 plus 5.25% of amount over \$15,000
	17,000	30,000	\$725 plus 5.90% of amount over \$17,000
	30,000		\$1,492 plus 6.85% of amount over \$30,000

Supplemental Tax: A supplemental income tax for the purpose of recapturing the benefits conferred to taxpayers through tax brackets with rates lower than the maximum rate applies to all taxpayers with NYAGI over \$100,000. The benefit of the lower brackets begins to be recaptured at \$100,000 of New York adjusted gross income and is totally recaptured at \$150,000. Once taxpayers' New York adjusted gross income exceeds \$150,000, all of their taxable income becomes effectively subject to a flat 6.85 percent tax rate. Maximum supplemental tax amounts equal \$794 for married taxpayers, \$563 for heads of households, and \$397 for single taxpayers.

Nonresidents and part-year residents first compute a base tax as if they were residents. This means that they start with their total federal adjusted gross income (FAGI) and take the full amounts of modifications, deductions, exemptions, and credits to compute a base

	tax. However, to ensure that they do not pay tax on non-New York income, they must then multiply this base tax by an income percentage. This is the ratio of "New York-source" New York adjusted gross income (NYAGI) to total ("sourced" plus "unsourced") NYAGI. For nonresidents, New York-source income generally consists of:					
	 wages earned in New Yo income derived from bus gain from the sale of New 	siness carrie			operty.	
		New York-source income for part-year residents consists of these income sources for their nonresident period, plus income from all sources for their resident period.				
1995 Tax Reduction Legislation	Tax year 1997 represented the personal income tax reduction effective over the 1995-1997 reduced annual tax liabilities providing average tax cuts of taxpayers received tax cuts of The table below summarizes legislation:	on program of 7 tax years, t s by over \$4 f nearly 20 p of at least 25	enacted in 19 he tax reduct billion comp percent. Statistical Summary

The personal income tax accounts for more than half of New York State tax revenues. Slightly under 7.5 million returns were timely filed by residents for tax year 1997. Approximately 2.2 million of these returns had no tax liability. These returns generally entailed requests for refunds of taxes withheld by employers and refundable tax credits. The remaining 5.3 million taxable returns reported a total tax liability of \$14.8 billion. In addition, approximately 610,000 nonresidents and part-year residents had tax liability of just over \$2.45 billion, and another 100,000 filed nontaxable returns.

Table 4 summarizes and compares information from taxable returns filed by residents in 1996 and 1997. In 1997, total New York adjusted gross income (NYAGI) equaled slightly over \$323 billion, compared with just approximately \$338 billion in total federal adjusted gross income (FAGI). The \$15 billion difference resulted from the excess of State subtraction modifications to federal adjusted gross income over addition modifications to FAGI. Major New York subtraction modifications include certain pension and annuity income, interest income derived from federal bonds, federally taxable refunds of State and local income taxes, and the portion of social security benefits subject to federal income tax. The major New York addition modification is interest from obligations of states other than New York. Appendix A provides more detailed income definitions.

The 1997 tax cut limited the growth in total tax to just 2.9 percent despite a 9.6 percent growth in total income. Table 4 shows that while total NYAGI increased by 9.6 percent, total tax liability increased by just 2.9 percent. This reflects the pronounced impact of the 1997 phase of the tax reduction program that lowered tax rates and increased standard deduction amounts. Absent such statutory tax cuts, tax liability would usually increase at a higher rate than income, reflecting provisions such as graduated tax rates and tax benefits that decline as income increases.

Table 4: Selected Tax Filing, Structure and Taxpayer Statistics for Resident Taxpayers in 1996 and 1997

	Major Items			
			Char	nge
	1996	1997	Amount	Percent
Total Number of Returns* (000)	7,392	7,486	94	1.3

	Dollars			
Average Tax Liability	2,771	2,795	24	0.9

* Includes nontaxable resident returns. The dollar amounts in the table pertain only to taxable returns.

Distribution of Taxpayer Income and Tax Liability

Table 5 compares the distribution of taxpayers, income, and tax liability in 1996 and 1997. It shows that in 1997, taxpayers with incomes above \$100,000 comprised a larger share of all taxpayers, and had markedly higher shares of total income and total tax liability, than in 1996. Growth in income, especially as a result of federal tax relief for capital gains effective in May 1997, pushed taxpayers into higher income classes, thereby reducing the percent of taxpayers, income and tax liability in income classes below \$50,000. The continued increase in standard deduction and earned income credit amounts in 1997 helped to reduce the share of tax liability further in NYAGI classes below \$50,000. Figure 1 depicts the distribution of these items in tax year 1997.

Table 5: Percent of Total Resident Taxpayers,		Тахра	iyers	Tax Liability			
Adjusted Gross Income, and	NYAGI Class	1996	1997	1996	1997	1996	1997
Tax Liability by New York Adjusted Gross Income Class in 1996 and 1997	Less than \$10,000	6.6	6.4	0.8	0.7	0.2	0.2
	\$ 10,000 - 19,999	16.5	15.7	4.4	3.9	2.0	1.3
	20,000 - 29,999	19.6	18.8	8.6	7.7	5.8	3.9
	30,000 - 49,999	25.4	25.4	17.4	16.2	15.7	12.0
	50,000 - 99,999	23.4	24.2	28.2	27.3	29.8	25.4
	100,000 and over	8.5	9.5	40.6	44.2	46.5	57.2
	Total	100.0	100.0	100.0	100.0	100.0	100.0

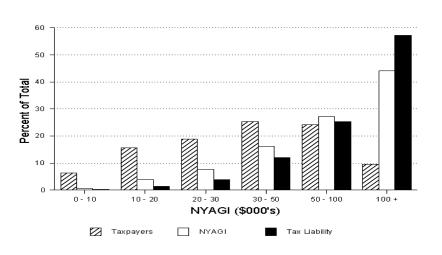

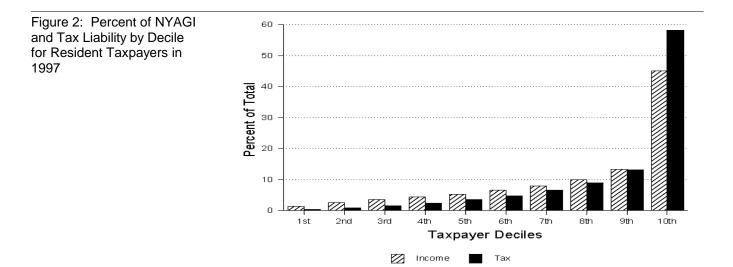

Table 6 and Figure 2 provide distributional analysis based on deciles of taxpayers. They indicate that the 10 percent of taxpayers with the lowest incomes had 1.3 percent of all income and paid 0.3 percent of all tax. In contrast, the 10 percent of taxpayers with the highest incomes had 45.1 percent of all income and paid 58.1 percent of all tax. The increasing effective tax rate, especially for the top decile, illustrates the progressive structure of the tax. The median income for taxpayers equaled \$35,736. Taxpayers below the median had 17.1 percent of total NYAGI and paid 8.6 percent of total tax, while those above the median bore more than 91 percent of the tax burden.

1/ Before adjustments, such as alimony paid, contributions to IRAs, and 50 percent of self-employment tax paid. 2/ Includes unemployment benefits, taxable social security, alimony, refunds of state and local income taxes and other income.

The robust 9.8 percent growth in total federal gross income in 1997 followed a strong 7.4 percent growth in 1996, reflecting the continued overall vitality in the economy. The exceptional growth in capital gains in large part reflected a sharply higher level of realizations due to the enactment of a preferential federal capital gains tax rate, effective in May 1997, and sharp appreciation of financial assets in the stock and bond markets.

Wages and salaries comprised the largest single income component, slightly over 70 percent of federal gross income. Its share has consistently dropped from closer to 75 percent in recent years. Capital gains constituted the 2nd largest single source of income, its share increasing from 6.5 percent in 1996 to 8.4 percent in 1997. Figure 3 depicts the overall distribution of components of federal gross income.

Itemized Deductions	Nearly 77 percent of resident taxpayers used the standard deduction in 1997, about the same share as in 1996. Approximately 1.24 million taxpayers claimed itemized deductions worth \$24.6 billion, compared to \$22.9 billion in the previous year.
---------------------	---

Table 8 and Figure 4 show that the deduction for taxes paid was the most often claimed New York State itemized deduction, followed closely by deductions for charitable contributions and interest paid.

Table 8: Resident Taxpayers Who Claimed Itemized Deductions by Type of Deduction in 1997

Deduction	Number of Taxpayers Claiming	Amount of Deductions (000)	Average Amount
Taxes Paid 1/	1,234,063	\$6,977,665	\$ 5,654
Charitable Contributions	1,187,024	6,194,976	5,219
Interest Paid	1,020,713	11,692,000	11,455
Medical and Dental	190,529	912,276	4,788
Other 2/	630,346	3,921,496	6,221
Total Before Limitations 3/	1,239,999	\$29,717,239	\$23,966
Total After Limitations 4/	1,239,999	\$24,586,268	\$19,828

1/ Primarily includes real property taxes. Federal deductions for New York State and local income taxes (except a portion of New York City's commuter earnings tax) and certain other federal deductions (e.g., interest expense relating to items exempt from tax in New York) totaling \$10.2 billion were not allowed on State returns.

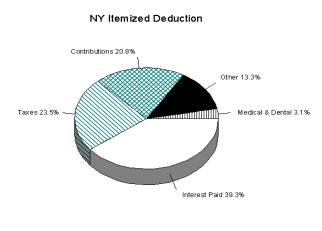

2/ Includes deductions for miscellaneous expenses and casualty/theft losses. Number claiming includes taxpayers claiming at least one of these deductions.

3/ Also includes minor corrections.

4/ Limitations are the federal limitation to which New York conforms, and the New York itemized deduction adjustment. Therefore, the data items refer to taxpayers who actually itemized deductions, after limitations and adjustments. Note also that columns are not additive, because of the limitations and because most taxpayers used more than one deduction.

As Table 8 shows, interest payments of approximately \$11.7 billion represented the largest component of itemized deductions in dollar terms. Deductions for interest paid were some 70 percent greater than that of the second largest deduction, taxes paid (nearly all property tax).

As described in Table 1 on page 7, the federal limitation, to which New York conforms, requires upper-income taxpayers to reduce their itemized deductions. Because this reduction applies against all deductions subject to it, its effect on particular deductions cannot be computed. However, it reduced 251,000 taxpayers' total itemized deductions by about \$2 billion. In addition, the New York itemized deduction adjustment, applicable to approximately 128,000 upper-income taxpayers, effectively reduced itemized deductions by an additional \$3.1 billion. The combined effect of the federal limitation and New York itemized deduction adjustment reduced total itemized deductions by \$5.1 billion, to slightly under \$24.6 billion. Like the federal limitation, the New York adjustment applies to aggregate itemized deductions, so its effect on any particular deduction cannot be calculated. Figure 4 shows the distribution of itemized deductions prior to the limitations. Figure 4: Percent of Gross Itemized Deductions* by Type for Resident Taxpayers in 1997

*Itemized Deductions (Before Limitations)

Dependent Exemptions The value of dependent exemptions claimed by resident taxpayers in 1997 totaled slightly under \$3.55 billion, about \$50 million less than in 1996. The decline is attributable mainly to the increase in standard deduction amounts, which reduced taxable income to zero for many filers and therefore reduced the usage of exemptions to reduce taxable income. Approximately 1.95 million taxpayers claimed at least one dependent exemption.

Credits	 The income tax contains a number of credits which reduce the total tax due dollar for dollar. Collectively, these credits reduced liability on taxable returns by \$552 million for tax year 1997. About 2.8 million resident taxpayers claimed at least one credit on their tax returns. These credits include: Household Credit Earned Income Tax Credit Special Additional Mortgage Recording Tax Credit Real Property Tax Credit Accumulation Distribution Tax Credit Investment Credit Resident Credit (Taxes Paid to Other Jurisdictions) Child and Dependent Care Credit Economic Development Zone Credits Farmers School Tax Credit

Earned Income Tax Credit

For tax year 1997, certain taxpayers could claim an earned income tax credit (EITC) equal to 20 percent of the federal credit. The EITC is refundable to residents and nonrefundable to nonresidents. (For more information on the credit, see Office of Tax Policy Analysis, Earned Income Tax Credit: Analysis of Credit Claims for 1997.)

Table 11 shows that in tax year 1997, some just under 1.1 million New York residents claimed \$319 million of the earned income tax credit. Approximately 95 percent of total credit claims were made on nontaxable returns, and thus constituted refunds, sometimes termed "negative taxes." The amount of EITC claimed on taxable returns totaled less than \$16 million (see Table 9 on page 19). Under the 1997 EITC structure, the credit increased with earned income to about \$9,000 (for claimants with children); the credit remained flat as earned income increased until income exceeded \$11,930, and it phased out at higher income levels. As a result, the highest average credit amount for 1997 occurred in the \$8,000-\$12,000 earned income class.

* Table includes taxable returns and nontaxable returns with a refund.

Source: Office of Tax Policy Analysis, Earned Income tax Credit: Analysis of Credit Claims for 1997

Other major credits include the resident credit and the child and dependent care credit. The resident credit for taxes paid to other jurisdictions totaled approximately \$378 million. The child and dependent care credit, claimed by 267,000 taxpayers, equaled approximately \$26 million.

Overpayments &The Department of Taxation and Finance is responsible for administering
the local income taxes imposed by the city of New York and city of
Yonkers. As a result, filers may attribute payments of tax (including
overpayments) to both their State and local tax liabilities.

Of the approximately 5.3 million resident taxable returns, slightly more than 3.2 million had an average overpayment of State and/or city of New York/city of Yonkers taxes amounting to \$741. Thus, for about 60 percent of taxpayers, withholding by employers or estimated tax payments exceeded total tax liability. About 3 million taxpayers received all of their overpayment as refunds averaging \$511, while about 80,000 (mainly upper-income) taxpayers credited all of their overpayment, which averaged about \$3,520, toward their 1998 tax. (Approximately 161,000 taxpayers requested both refunds and credits averaging \$872 and \$2,747, respectively.) Slightly under 2.1 million taxpayers owed an average of \$738 in State and local taxes when they filed their returns.

Nonresidents and Part-Year Residents

Nonresidents and part-year residents typically account for between 10 and 15 percent of all taxpayers and tax liability. Table 12 provides a summary of nonresident and part-year resident returns filed in 1997.

Table 12: Selected Tax Filing, Structure and Taxpayer Statistics for	Filer	Total Number of Returns	Total Number of Taxpayers	Base Tax Before Proration (000)	Total Tax After Proration (000)	Average Tax Liability
Nonresident and Part-Year	Full-Year Nonresidents	549,374	476,194	\$5,766,769	\$2,174,706	\$4,567
Resident Taxable Returns in 1997	Part-Year Residents	158,850	132,967	\$ 512,361	\$ 281,808	\$2,119

For full-year nonresidents, the ratio of final tax to base tax equaled about 38 percent (\$2,175 million/\$5,767 million). This means that, overall, 38 percent of nonresidents' New York adjusted gross income came from New York sources. For part-year residents, the corresponding figure equaled approximately 55 percent (\$282 million/\$512 million), the higher percentage reflecting New York-source income earned during their resident period.

Compared to the 1996 tax year, the number of full-year nonresident taxpayers increased by about 1 percent, about the same as for full-year residents. However, their total tax liability increased by approximately 12 percent, compared to 3 percent for full-year residents. The main reasons are higher average income growth (12 percent) and the increase in the proration percentage. In addition, nonresidents had a higher percentage of the total income from New York sources in 1997 than in 1996 (38 percent versus 36.5 percent).

Subtraction Modifications

Table 14 shows resident taxpayers' use of major New York subtraction modifications to federal adjusted gross income between 1991 and 1997.

These include:

- 1) the full exemption of social security benefits subject to federal income tax;
- 2) the full exemption of interest on U.S. government obligations; and
- the exclusion of up to \$20,000 of pensions and annuities for individuals age 59 1/2 and over (up to \$20,000 each for qualifying married persons filing jointly).

The subtraction for federally taxable social security benefits rose markedly in 1994, reflecting the increase in the maximum amount of benefits subject to federal tax from 50 percent to 85 percent, effective in tax year 1994. It also jumped in 1997, in large part because strong income growth (especially in capital gains) shifted many taxpayers' benefits from nontaxable to taxable. Interest rate reductions and the increased attractiveness of equity markets versus federal government bonds caused the modification for U.S. government bond interest to decline substantially from 1991 to 1994. Taxpayers reported strong growth in the interest subtraction for federal obligations again in 1995 as investors sought to take advantage of significant increases in interest rates.

Table 14: Major SubtractionModifications for Resident	Tax Year	Social Security	U.S. Government Bond Interest	Pension and Annuity Exclusion
Taxpayers from 1991	1991	1,608	2,744	3,097
Through 1997	1992	1,414	2,256	2,412
(Millions of Dollars)	1993	1,620	1,665	3,257
	1994	2,714	1,641	3,093
	1995	3,158	2,309	3,320
	1996	3,436	2,502	3,432
	1997	4,153	2,418	4,180

Itemized Deductions Table 15 shows taxpayers' average itemized deductions from 1991 through 1997. Absent major law changes, average itemized deductions generally increase from year to year due to increases in incomes (e.g., charitable giving usually rises with income) or due to the indirect effects of increasing costs (e.g., property taxes generally rise as the cost of schools and local government increases). Moreover, the increase in standard deduction amounts from 1995 through 1997 had the effect of increasing the average amount of itemized deductions because many taxpayers with relatively lower amounts of itemized deductions shifted to the standard deduction.

However, the deduction for interest expense is also sensitive to interest rates, which generally fell from 1991 through 1995. In addition, the sizable increase in the average deduction for charitable contributions in 1996 and 1997 in part reflected the strong income growth (especially capital gains) for higher-income taxpayers, who likely increased contributions accordingly. In addition, some taxpayers likely accelerated contributions to take advantage of the deduction for the fair market value of stock contributed to private foundations, which was scheduled to expire in May 1997 (though it was subsequently extended through June 1998).

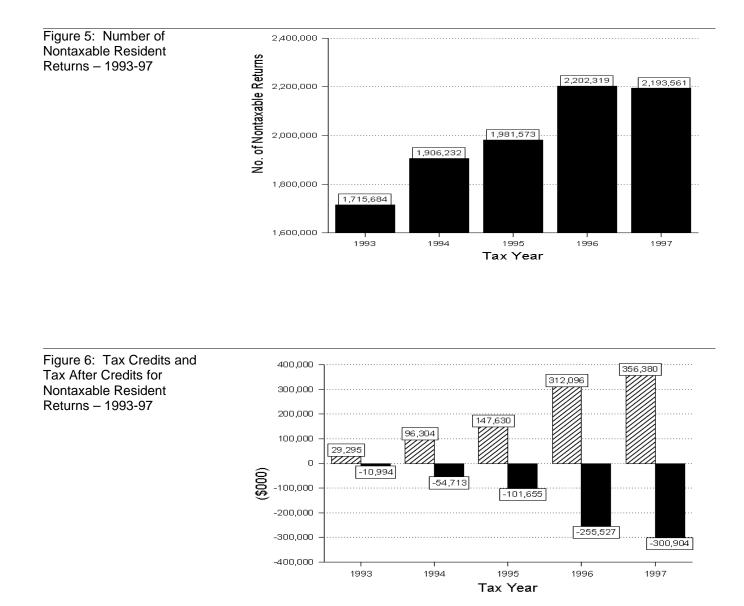

Table 15: Average Major Itemized Deductions for	Тах	Taxes*	Contributions	Interest	Medical
	1991	3,667	2,958	10,483	4,184
Resident Taxpayers from 1991 Through 1997	1992	3,877	3,009	9,837	4,238
(Dollars)	1993	3,942	3,528	9,163	4,189
	1994	4,168	3,274	9,111	4,157
	1995	4,404	3,714	9,901	4,237
	1996	4,762	4,577	10,947	4,734
	1997	5,654	5,219	11,455	4,788

* After subtraction for income taxes.

Note: Amounts reflect deductions "claimed" not "allowed," because limitations on itemized deductions reduced the overall value of deductions claimed.

Focus on Nontaxable Returns

	The 1995 tax reduction legislation provided significant tax relief to lower-income taxpayers. This was due to its significant increases in standard deduction amounts and in enhancement of the refundable earned income tax credit (EITC) which first took effect in 1994. In addition, for the 1996 and 1997 tax years, the child and dependent care credit was significantly increased for taxpayers with NYAGI under \$14,000, and made refundable. A refundable "farmer's school tax credit" was also enacted, effective in tax year 1997.				
	As a result, over the past four years, significantly more returns are now filed by persons who do not owe tax, but file to secure the EITC and other refundable credits. This report has traditionally focused on taxable returns. However, due to the increasing importance of nontaxable returns to the overall filing population, this section provides an overview of nontaxable returns (either zero tax or refundable credits) filed for the 1997 tax year.				
Overview of Tax Years 1993 Through 1997	Tables 16-20 focus on the (generally negative) tax liabilities by NYAGI class from 1993 to 1997. "Negative tax liabilities" refer to filers who receive refundable credits in excess of their pre-credit tax liability. Higher negative liabilities and negative effective tax rates correspond to higher amounts of refundable credits which benefit filers who claim them.				
	Tables 16-20 and Figures 5 and 6 illustrate the importance of tax reduction initiatives which began in 1994, especially the multi-year tax cut legislation beginning in 1995. Table 16 shows that the number of nontaxable resident returns increased from about 1.7 million in 1993 to 2.2 million by 1996, with the number dropping slightly in 1997. Total credits increased from \$29 million to \$356 million, which, along with increases in the standard deduction, lowered the tax after credits from -\$11 million to over -\$301 million. Correspondingly, the overall effective tax rate on nontaxable returns dropped from -0.1 percent in 1993 to -1.9 percent in 1997.

Table 17 provides detail on claims for each of the major credits for tax years 1993 through 1997. The earned income tax credit grew nearly sixfold since 1994, due to statutory increases at both the State and federal levels. Because no law changes occurred, the household and real property tax credits remained fairly constant. Finally, the child care credit began to increase modestly in 1996 due to legislation increasing the percentages of the federal credit for low-income filers.

Table 17: Summary of Credits on Nontaxable Resident Returns – 1993-1997 (Millions of Dollars) Year Earned Income Household Real Property Tax Child Care Other Total 1997 9.9 291.1 23.2 9.2 23.0 356.4 24.3 312.1 1996 258.0 9.5 5.8 14.5 2.5 9.9 1995 101.6 22.0 11.6 147.6 1994 52.5 20.0 10.0 2.5 11.3 96.3 8.5 1.0 29.6 1993 N/A 11.4 8.7

Usage of Modifications – 1997

Table 18 shows major subtraction modifications on nontaxable returns. These subtractions reduced federal adjusted gross income of \$25 billion by almost \$10 billion in total.

NYAGI Class	Adjuste	Positive Federal Adjusted Gross Income		Social Security Benefits		NY & Federal Government Pensions		Pensions & Annuities		U.S. Government Interest	
	Number	Amt. (000)	Number		Amt. (000)	Number	Amt. (000)	Number	Amt. (000)	Number	Amt. (000)

Usage of Deductions – 1997

Table 19 shows that standard and itemized deductions totaled over \$13.6 billion, reducing most of the \$15.6 billion of NYAGI subject to tax. Note that many filers in the NYAGI class under \$10,000 did not use the full amount of their deductions allowed under law, with the amount they actually used equal to the amount that reduced their taxable income to zero.

Table 19: Deductions on Nontaxable Returns – 1997 Tax Year

	Positive New		Total Standard & Itemized Deductions Used		
NYAGI Class	Number	Amt. (000)	Number	Amt. (000)	
Under \$10,000	1,619,743	\$ 6,825,025	1,536,109	\$ 6,764,445	
\$10,000 - 15,000	352,849	4,349,612	352,849	3,955,115	
15,000 - 20,000	170,646	2,909,870	170,646	2,023,124	
20,000 - 25,000	37,986	815,899	37,986	516,217	
25,000 and over	12,339	660,829	12,339	426,565	
Total	2,193,563	\$15,561,236	2,109,929*	\$13,685,466	

* Number using deductions is less than total number of returns because 83,634 returns had negative incomes and therefore did not use deductions.

Usage of Credits – 1997

Table 20 shows credits claimed on nontaxable returns. The refundable earned income credit was far and away the largest credit.

* Does not include additional credits claimed on "stand alone" IT-214 forms filed by persons not required to file regular tax returns.

** Total number of credits claimed. Some filers claim more than one credit.

Note: "Other" credits include resident, farmers' school tax, and various business credits.

Tables Accompanying This Report

The remainder of this publication contains three sections of statistical tables displaying significant features of New York State taxpayers for the 1997 tax year. Section 1 (tables 21 through 37) depicts distributions of resident, nonresident and part-year resident taxable returns classified by New York adjusted gross income or New York-source income. Summary information only is provided for nonresidents and part-year residents. Section 2 (tables 38 through 57) displays selected tax components by filing status for resident taxable returns.

Section I: Resident, Nonresident and Part-Year Resident Taxable Returns Classified by New York Adjusted Gross Income or New York-Source Income Tables 21 Through 37

2/ Amount of federal itemized deductions after federal limitation (where applicable).

3/ State, local and foreign taxes paid and other subtraction adjustments.

4/ Addition adjustments to federal deductions are due to differences between federal and state law.

d/ Tax Law secrecy provisions prohibit disclosure.

1997 Fiduciary Returns

In addition to tax returns filed by individual taxpayers, fiduciaries of estates and trusts are also required to file returns and pay the personal income tax. "Fiduciaries" are persons responsible for paying the tax of either the estates of deceased taxpayers, or of trusts. The latter consists of entities, such as charitable foundations, with income subject to tax.

The tax rates for estates and trusts are the same as for single individuals. Like the regular income tax, the base is generally based on federal amounts, before certain modifications and adjustments. Fiduciaries file on Form IT-205.

Table 58 shows that approximately 71,000 resident estates and trusts had 1997 tax liability of approximately \$228 million. Approximately 1,300 nonresident and part-year resident estates and trusts paid just under \$6.5 million in tax. In total, Table 58 shows that 72,241 fiduciary returns had total tax liability after credits of \$234.7.

The data in Table 58 is based on all fiduciary returns received for the 1997 tax year. This differs from data in the remainder of this report, which come from a sample of regular tax returns.

Appendix A: Glossary of Terms

Federal Adjusted Gross Income (FAGI)	The amount of income earned or received during the income year after certain exclusions and adjustments. Major exclusions from gross income include many government transfer payments, employer-provided pension contributions and fringe benefits, most capital gains from the sale of a primary residence, and a portion of social security benefits. Major adjustments to gross income include deductions for individual retirement arrangements, alimony paid, employee moving expenses, and one-half of self-employment tax paid.
New York Adjusted Gross Income (NYAGI)	The amount of federal adjusted gross income earned or received during the income year after certain modifications and before the subtraction of either the standard or itemized deductions, and dependent exemptions. For example, New York State income tax refunds, included in FAGI, are subtracted in determining NYAGI. Also, certain pension and annuity income is subtracted from FAGI in arriving at NYAGI, as is interest on U.S. government bonds. On the other hand, taxpayers must add interest income from other states' debt obligations to FAGI when determining their NYAGI.
	Nonresidents and part-year resident use the ratio of New York-source NYAGI to federal-source NYAGI as the basis for allocating their tax liability to reflect income from New York sources. Generally, this is limited to wages and other income from performing services or conducting a trade or business in New York, and gains from the sale of real property located in New York. Also, New York-source modifications include those modifications which relate to income from New York sources. However, federal-source NYAGI is used in the sampling of nonresident and part-year resident returns, and in the distributional analysis of these taxpayers. Some major differences exist between income defined for tax purposes and the personal income series for New York published by the U.S. Department of Commerce's Bureau of Economic Analysis. Personal

	 income is more comprehensive in that it includes most federal exfrom income, such as: a) tax-exempt interest; b) workers compensation benefits; c) payments in kind; d) public assistance transfer payments; e) social security benefits; and f) imputed income (e.g., the estimated rental value of owner-or housing). 						
	On the other hand, personal income is limited to New York State residents and does not include capital gains. Income defined for tax purposes includes both certain income earned by nonresident taxpayers and capital gains.						
Forms	<u>Short Forms</u> :	IT-100 and IT-200, used by taxpayers who have limited income sources, use the standard deduction, and make limited use of credits.					
	<u>Long Forms</u> :	IT-201 and IT-203, used by taxpayers reporting income from several sources, making adjustments to income, claiming itemized deductions, and/or using several credits. Nonresidents and most part-year residents use the long form IT-203, which is similar to the IT-201 used by resident taxpayers.					
Nontaxable Returns	A return with refundable cre	no tax liability, or a negative tax liability resulting from edits.					
Nonresident	A taxpayer w	ho is not a resident for the entire tax year.					
Part-Year Resident	nonresident to	ho changes from a resident to a nonresident, or from a b a resident, during the tax year.					
Return		orms IT-100, IT-200, IT-201, and IT-203. A husband and pint return are considered to be one taxpayer.					
Taxable Return	A return with	any amount of tax liability.					

Taxable Year	The annual period for which the taxpayer computes income earned or received. This study includes tax returns filed for the calendar year 1997 and fiscal years ending before February 1, 1998.
Tax Liability	 For residents, the amount of tax is based on New York taxable income. The tax is computed by subtracting allowable deductions and exemptions from New York adjusted gross income, and multiplying the remainder by the appropriate New York State tax rate schedule. The result, minus the amount of allowable credits, equals tax liability. "Negative tax liability" refers to the amount of refundable credits received by persons who otherwise have a zero tax liability. The computation for full-year nonresidents and part-year residents is different. They first compute their base tax through the applicable tax rate schedule and subtraction of the household, earned income, and dependent care credits. They then multiply this after-credit liability by the ratio of New York-source NYAGI to total NYAGI to arrive at a prorated tax. After subtracting other, refundable credits, final New York
	tax liability results.
Taxpayer	An individual or married couple who files a return with some amount of tax liability. When married couples file separate returns, each spouse constitutes a taxpayer.

Appendix B: Description of the Sample

The study does not fully account for total tax liability as shown in collection data. It is based on timely filed returns for the current year and does not include late or delinquent returns, or those delayed by audit or processing factors. Also excluded are fiduciaries on form IT-205. Table 58 in the previous section summarized data from these returns.

Data in this report are based on a sample of approximately 118,000 personal income tax returns of all types, selected from a total of nearly 8.2 million returns. The sample includes both taxable and nontaxable returns, but data in this report primarily relate to those with some State income tax liability. The sample is based on New York adjusted gross income and drawn according to the ratios shown in Table B-1. The sampling ratio is defined as the selection of one out of every "nth" return. For example, the following table shows that for IT-100 returns with income between \$75,000 and \$100,000, 1 out of every 124 returns was selected.

* The income classifier for IT-100, IT-200 and IT-201 returns is New York adjusted gross income.

The income classifier for IT-203 returns is the federal amount of New York adjusted gross income.

A sample is conducted to eliminate the need to tabulate components of income and deductions from all of the approximately 8.2 million tax returns. However, a sample produces the undesirable effect of a sampling error. This error can be reduced by stratifying the sample. As in past years, the sample was stratified by income class and return type for resident and nonresident returns. The long-form returns IT-201 and IT-203 were additionally stratified by deduction status: standard or itemized. The IT-203 returns were further stratified by full-year nonresidents and part-year residents. Also, the income classifier for

IT-203 returns is federal-source NYAGI. The sampling error depends not only on the sample size, but also on the allocation of the sample to the different strata of income classes and return types. For the 1997 study, the allocation of the sample was computed according to statistical principles which minimized the sample size while maintaining or improving the precision of estimation of total income, tax liability and six of the most important federal components of income in comparison to past studies. In general, the sampling plan requires the proportion of returns to be sampled to increase with income. Appendix C: Highlights from "New York State Income Statistics – 1947 – An Analysis of New York State Personal Income Tax Returns"

NEW YORK STATE INCOME STATISTICS

– 1947 –

AN ANALYSIS

OF

NEW YORK STATE PERSONAL INCOME TAX RETURNS

RESEARCH AND STATISTICS BUREAU DEPARTMENT OF TAXATION AND FINANCE

JANUARY 1949

NEW YORK STATE INCOME STATISTICS

- 1947 -

This study represents the first in an annual series of analyses of New York State personal income tax returns undertaken to meet a long recognized need. Because of the wide applicability of the data, the Tax Commission is now making the statistics available to the public. It must be pointed out that the study includes the capital gains tax and is limited to taxable returns none of which had been audited prior to the survey.

The conduct of this study was greatly facilitated and its scope markedly broadened by the introduction of punch-card accounting equipment in the Income Tax Bureau and subsequently in the Research and Statistics Bureau. This innovation followed the 1947 Legislature's authorization of the optional standard deduction in lieu of itemized deductions.

The study is based on a sample analysis of taxable returns selected in accordance with techniques already in use in other jurisdictions. The sampling plan called for selecting returns according to the amount of tax liability closely corresponding to certain net income ranges. The schedule below was adopted for the study.

Tax Liability	Approximate	Sampling
Range	Net Income Range	<u>Ratio</u>
Under \$35.00	Under \$5,000	0.5%
\$ 35.00 to \$ 169.99	\$ 5,000 to \$ 9,999	5 %
\$ 170.00 to \$ 799.99	\$10,000 to \$24,999	10 %
\$ 800.00 to \$1,799.99	\$25,000 to \$49,999	50 %
\$1,800 and up	\$50,000 and up	100 %

The samples were selected from punch-cards prepared by the Income Tax Bureau in the course of its deposit process. Recorded on these cards were several items including a deposit serial number and the amounts of tax liability and tax payment. Since the short-form return is a punch-card, the desired information was already on the return. The cards for the long-term returns were sorted mechanically according to the amount of tax liability and the appropriate percentage samples removed. These were then matched with the long-form returns according to the deposit serial number. In the case of the short-form returns, however, after the cards had been sorted according to the amount of tax liability, the sample returns were selected directly. Then, from the returns, the detailed survey data were keypunched preparatory to tabulation.

The total amount of tax liability shown on the accompanying statistical tables includes the additional 10% levied to amortize the veterans' bonus bonds. Even after adjusting the data for this factor, the total tax liability is different from the total net receipts to the General Fund during the fiscal year ended March 31, 1949. There are several reasons for this, the chief one being the fact that a return for a given calendar year may be filed either before or after the fiscal year in which it is normally filed. Many taxpayers remit their payments one to four months in advance of the due date, and a number of taxpayers are delinquent and do not remit all or part of their tax during the fiscal year in which it is due. Furthermore, the amount of assessments and refunds which will ultimately be made on the returns of a given base year are not known in advance.

For the income year 1947, personal exemptions were as follows: single persons, \$1,000; married persons and heads of families, \$2,500.

-2-

There is a credit for each dependent of \$400. The following rate schedule was applicable during the income year:

Net Taxable Income	Statutory Rate (Normal Tax)	Rate As Adjusted*
Up to \$1,000	2%	1.2%
\$1,001 to \$3,000	3	1.8
\$3,001 to \$5,000	4	2.4
\$5,001 to \$7,000	5	3.0
\$7,001 to \$9,000	6	3.6
\$9,001 and up	7	4.2

*For the income year 1947, the normal tax was subject to a 50% reduction on that portion paid into the General Fund. An additional tax of 10% of the full normal tax was imposed for amortization of veterans' bonus bonds. These adjustments resulted in a 40% net reduction in tax liability.

To the extent that changes in administration and in the needs for these statistics occur, it may be possible or necessary to recast these statistics in future years. However, the main objectives will continue to be the provision of basic information on which to estimate the fiscal effects of proposed changes in the law and the establishment of a body of statistics useful in the many facets of economic analysis which the Commission is called upon to undertake.
