Statistical Highlights of 2001 Returns

Summary

Some highlights from tax year 2001 personal income tax returns include:

- Total federal adjusted gross income (FAGI) of resident taxpayers (returns with positive tax liability) for 2001 equaled approximately \$425 billion, a decrease of \$32 billion (7 percent) from 2000. New York adjusted gross income (NYAGI) totaled \$406 billion, compared to \$437 billion in 2000.
- Total State income tax liability of residents, nonresidents, and part-year residents filing taxable returns equaled approximately \$23.0 billion, a decrease of 8.7 percent from 2000. Full-year resident taxpayers accounted for 19.4 billion, or 84 percent of total tax.
- Average tax liability per taxable full-year resident return equaled \$3,399, down from \$3,681 in 2000.
- Total tax liability per taxable resident return, as a percentage of NYAGI, declined slightly from 4.9 percent in 2000 to 4.8 percent in 2001.
- The total number of tax returns filed with the Department of Taxation and Finance in 2001 totaled approximately 8.9 million, slightly less than the number filed in 2000. About 2.5 million of this total were nontaxable returns. The number of taxable returns decreased from 6.6 million to 6.4 million, with resident returns accounting for 89 percent of this total.

Introduction and Background

This publication contains findings from a study of 2001 personal income tax returns filed during 2002. To aid the reader in interpreting the contents of this report, several key definitions and descriptions appear in Appendix A. It is particularly important to note that the term “taxpayer” means an individual, or married couple filing jointly, who files a return indicating a positive tax liability. By this definition, the terms “taxpayers” and “taxable returns” are interchangeable.

This study contains statistics based on a stratified sample of approximately 128,000 personal income tax returns selected from a total filing population of approximately 9 million returns, approximately 8.1 million of which were filed by New York State residents. Both taxable and nontaxable returns were sampled. However, this report primarily provides statistics on 6.4 million resident, part-year resident, and nonresident returns with a New York personal income tax liability. Appendix B details the specific sampling techniques employed in developing this study.

The study contains information required to compute tax liability or tax owed by taxpayers on timely filed returns for the 2001 tax year. The information reflects corrections for computational or minor errors, but does not account for subsequent audits or amendments that may occur after initial processing. Therefore, the data contained in the report do not reflect final 2001 liability for all returns. The concept of tax liability differs from tax collections. Actual tax collections during the State fiscal year (April 1 through March 31) include receipts of various types of payments made to satisfy taxpayers’ tax liability including withholding, estimated payments, final payments, refunds, audit payments, and payments from delinquent accounts. Personal income tax collection data are presented in the annual *New York State Tax Collections* statistical report prepared by the Office of Tax Policy Analysis (OTPA).

This report describes the prominent features of New York's personal income tax, with particular emphasis on the 2001 tax year. It also includes taxpayer profiles consisting of number of taxable returns, sources of income, federal adjustments, New York modifications, deductions, dependent exemptions, tax liability and credits by NYAGI class, filing status and return type. In addition, it includes separate sections on income, itemized deduction amounts, exemptions, available credits and information on refundable credits. Finally, it compares statistics for 2001 with those from the prior year for most of these items. Appendix C includes the major tax forms which taxpayers filed for tax year 2001.

The statistical tables accompanying this report cover resident, part-year resident, and nonresident returns. The "Statistical Summary" section focuses on resident returns because the data for nonresidents and part-year residents are not comparable to data from resident returns. Amounts of income, deductions, and credits reported on nonresident and part-year resident returns are not comparable to those amounts on resident returns, because they represent gross amounts before allocation of the base tax to reflect the New York-source portion of total federal gross income. The report also includes a description and statistical information from returns filed by fiduciaries of estates and trusts.

Comparison With The 2000 Tax Year Report

The population values for the income tax return sample have historically been determined by December 31 of the calendar year following the tax year being sampled. Because of the terrorist attacks of September 11, 2001, the regular filing pattern of returns for the 2000 tax year was interrupted and a new procedure was put in place for sampling the returns used in *Analysis of 2000 Personal Income Tax Returns* released September 2003. In particular, because both the federal and New York State governments extended the time period for filing extensions, the time period for selecting the 2000 sample was extended through March 31, 2002 for returns with income of under \$1 million, and through August 31, 2002 for millionaire returns. The methodology for sampling returns in the current study (2001) returned to that of years prior to 2000. Specifically, the population values used to develop the 2001 tax year sample to produce this report were determined by December 31, 2002.

There was also a change in the procedure for selecting the population of returns that was used to weight the 2000 sample. In addition to extending the date for defining the 2000 tax year population, "manually handled" returns were included for the first time in the population of year 2000 tax returns. These manual returns are also included in the sample of 2001 tax returns used in this report and will be included in samples generated to produce future reports.

Comparison With Other OTPA Reports

The aggregate statistics reported in this publication do not completely coincide with data presented in the *New York Adjusted Gross Income and Tax Liability, Analysis of State Personal Income Tax Returns by Place of Residence (POR)* publication also prepared by OTPA. The data provided in this report are based on a statistically valid sample of approximately 128,000 personal income tax returns selected from a population of just under 9 million returns. OTPA staff reviewed taxpayer entries, inserted missing data, corrected data and recomputed subtotals. (See Appendix B for a more complete description of the sample.) Using either the number of tax returns, adjusted gross income, or tax liability data for each sample cell, the sample was inflated to represent all timely filed 2001 State personal income tax returns. In comparison, the POR publication tabulates information from all returns filed with the Department of Taxation and Finance (the Department). The POR report represents the compilation of records on the Department's master file on a particular day. The data variables represent amounts accepted by the Department's tax return processing system within system tolerances. Analysts compiled the data and reported the statistics with minimal review. Furthermore, the report covers only some of the information contained on New York State income tax returns. In addition to the POR report, the Office of Tax Policy Analysis also produces special legislatively mandated studies on the earned income tax credit and real property tax credits.

Prominent Features

New York automatically conforms to most federal definitions of income and itemized deductions. Therefore, some of the tables contained in this study refer to federal components of income and federal components of deductions, the starting point for State computations. New York was one of twelve states which automatically conformed to federal adjusted gross income in 2001. However, like most of these states, New York modifies federal adjusted gross income for various reasons. These modifications include exemptions for certain pensions and social security, and interest on federal obligations (which federal law precludes states from taxing).

Table 1 highlights the major provisions of New York's 2001 personal income tax law.

Table 1: Selected Provisions of New York State Personal Income Tax Structure – 2001 Tax Year

Social Security Benefits	Fully Exempt
Pension Income	New York State and local and federal pensions fully exempt; others eligible for up to \$20,000 exclusion (\$20,000 each spouse for married couples).
Married Standard Deduction	\$13,400
Head of Household Standard Deduction	\$10,500
Single Standard Deduction	\$7,500
Dependent Filer Standard Deduction	\$3,000
Itemized Deductions	Federal amount (after limitation*) minus deduction for state and local income tax. Upper-income taxpayers must further reduce itemized deductions by up to 50 percent.
Dependent Exemption Amount	\$1,000
Tax Treatment of Married Taxpayers	Joint rate schedule with full income splitting.
Minimum Tax	Add-on tax equal to 6 percent of certain federal tax preference items, minus deductions of \$5,000 and regular tax.

*Taxpayers with federal AGI of \$132,950 or more (\$66,475 for married filing separately) must reduce their itemized deductions by 3 percent of the amount by which their AGI exceeds \$132,950 (\$66,475 for married filing separately). The reduction does not apply to deductions for medical expenses, casualty and gambling losses, and investment interest expense, and it cannot reduce deductions subject to the limitation by more than 80 percent.

New York has a graduated rate structure in which tax rates increase as taxable income increases. Table 2 shows the 2001 tax rate schedule. Also, the supplemental tax described in Table 2 causes certain upper-income taxpayers to lose the value of tax rates below the top rate.

This effectively means that these taxpayers paid a flat tax of 6.85 percent on all of their taxable income. Credits which decline in value as income rises also help make the tax progressive. On the other hand, New York permits most federal itemized deductions, which tend to diminish progressivity. Federal and State limitations on itemized deductions reduce some of this effect.

30,000		\$1,492 plus 6.85% of amount over \$30,000

Supplemental Tax: A supplemental income tax for the purpose of recapturing the benefits conferred to taxpayers through tax brackets with rates lower than the maximum rate applies to all taxpayers with NYAGI over \$100,000. The benefit of the lower brackets begins to be recaptured at \$100,000 of New York adjusted gross income and is totally recaptured at \$150,000. Once taxpayers' New York adjusted gross income exceeds \$150,000, all of their taxable income becomes effectively subject to a flat 6.85 percent tax rate. Maximum supplemental tax amounts equal \$794 for married taxpayers, \$563 for heads of household, and \$397 for single taxpayers.

Nonresidents and part-year residents first compute a base tax as if they were residents. This means that they start with their total federal adjusted gross income (FAGI) and take the full amounts of modifications, deductions, exemptions and credits to compute a base tax. However, to ensure that they do not pay tax on non-New York

income they must then multiply this base tax by an income percentage.

This is the ratio of “New York-source” New York adjusted gross income (NYAGI) to total (“sourced” plus “unsourced”) NYAGI. For nonresidents New York-source income generally consists of:

- 1) wages earned in New York;
- 2) income derived from business carried on in New York; and
- 3) gains from the sale of New York real property and business property.

New York-source income for part-year residents consists of these income sources for their nonresident period, plus income from all sources for their resident period.

Statistical Summary

The personal income tax accounts for more than half of New York State tax revenues. Approximately 8.1 million returns were timely filed by full-year residents for tax year 2001, of which 2.3 million had no tax liability. These nontaxable returns generally entailed requests for refunds of taxes withheld by employers, and refundable tax credits. The remaining 5.8 million taxable returns reported a total tax liability of \$19.4 billion. In addition, approximately 694,000 nonresidents and part-year residents had tax liability of just over \$3.6 billion, and another 116,000 filed nontaxable returns.

Table 3 summarizes and compares information from taxable returns filed by residents in 2000 and 2001. In 2001, total New York adjusted gross income (NYAGI) equaled approximately \$406 billion, compared with approximately \$425 billion in total federal adjusted gross income (FAGI). The \$19 billion difference resulted from the excess of State subtraction modifications to federal adjusted gross income over addition modifications to FAGI. Major New York subtraction modifications include certain pension and annuity income, interest income derived from federal bonds, federally taxable refunds of State and local income taxes, and the portion of social security benefits subject to federal income tax. The major New York addition modification is interest from obligations of states other than New York. Appendix A provides more detailed income definitions.

Distribution of Taxpayer Income and Tax Liability

Table 4 compares the distribution of taxpayers, income, and tax liability in 2000 and 2001. It shows that in 2001, taxpayers with incomes above \$200,000 made up a smaller share of total taxpayers and had smaller shares of total income and total tax liability, than in 2000. Figure 1 depicts the distribution of these items in tax year 2001.

Table 5 and Figure 2 on the following page provide distributional analysis based on deciles of taxpayers. They indicate that the 10 percent of taxpayers with the lowest incomes had 1.2 percent of all income and paid 0.3 percent of all tax. In contrast, the 10 percent of taxpayers with the highest incomes had 47.3 percent of all income and paid 59 percent of all tax. The increasing effective tax rate, especially for the top decile, illustrates the progressive structure of the tax. The median income for taxpayers equaled \$39,658. Taxpayers below the median had 16 percent of total NYAGI and paid 8.4 percent of total tax, while those above the median bore 91.6 percent of the tax burden.

Reflecting a slowdown in the State's economy, total federal gross income declined 7.1 percent in 2001. Except for wages and partnership, estate, trust, and rent/royalty income which exhibited small growth, all sources of income declined in 2001. Wages and salaries comprised the largest single income component, about 72.2 percent of federal gross income. Capital gains constituted the second largest single source of income, although its share decreased from 12.4 percent in 2000 to 6.2 percent in 2001. This is attributable to the large drop in net capital gains income of \$30.8 billion, or 53.7 percent, from 2000 caused by the decline in financial markets in 2001. Figure 3 depicts the overall distribution of components of federal gross income.

Figure 3: Distribution of Federal Gross Income by Source for Resident Taxpayers in 2001

Standard and Itemized Deductions

Approximately 74 percent of resident taxpayers used the standard deduction in 2001 compared to 75 percent in 2000. Approximately 1.5 million taxpayers claimed itemized deductions worth \$32.2 billion, compared to \$31.2 billion in the previous year.

Table 7 and Figure 4 show that the deduction for taxes paid was the most often claimed New York State itemized deduction, followed closely by deductions for charitable contributions and interest paid.

Table 7: Resident Taxpayers Who Claimed Itemized Deductions by Type of Deduction in 2001

Deduction	Number of Taxpayers Claiming (000)	Amount of Deductions (Millions)	Average Amount

Total Before Limitations 3/	1,484	39,728	26,771
Total After Limitations 4/	1,484	\$32,210	\$21,705

1/ Primarily includes real property taxes. Federal deductions for New York State and local income taxes and certain other federal deductions (e.g., interest expense relating to items exempt from tax in New York) totaling \$15.4 billion were not allowed on State returns.

2/ Includes deductions for miscellaneous expenses and casualty/theft losses. Number claiming includes taxpayers claiming at least one of these deductions.

3/ Also includes minor corrections.

4/ Limitations are the federal limitation to which New York conforms, and the New York itemized deduction adjustment. Therefore, the data items refer to taxpayers who actually itemized deductions, after limitations and adjustments. Note also that columns are not additive, because of the limitations and because most taxpayers used more than one deduction.

As Table 7 also shows, interest payments of approximately \$15.0 billion represented the largest component of itemized deductions in dollar terms. Deductions for interest paid were 66 percent greater than that of the second largest deduction which were charitable contributions.

As described in Table 1 on page 7, the federal limitation, to which New York conforms, requires upper-income taxpayers to reduce their itemized deductions. Because this reduction applies against all deductions subject to it, its effect on particular deductions cannot be computed. However, it reduced 316,000 taxpayers' total itemized deductions by approximately \$2.9 billion. In addition, the New York itemized deduction adjustment, applicable to approximately 188,000 upper-income taxpayers, effectively reduced itemized deductions by an additional \$4.6 billion. The combined effect of the federal limitation and New York itemized deduction adjustment reduced total itemized deductions by \$7.5 billion, to \$32.2 billion. Like the federal limitation, the New York adjustment applies to aggregate itemized deductions, so its effect on any particular deduction cannot be calculated. Figure 4 shows the distribution of itemized deductions prior to the limitations.

Figure 4: Percent of Gross Itemized Deductions Before Limitations by Type for Resident Taxpayers in 2001

Dependent Exemptions

The value of dependent exemptions claimed by resident taxpayers in 2001 totaled nearly \$3.7 billion, nearly unchanged from the amount claimed in 2000. This amount has remained fairly constant since 1995. Approximately 2.0 million taxpayers claimed at least one dependent exemption.

Credits

The income tax contains a number of credits which reduce the total tax due dollar for dollar. Collectively, these credits reduced liability on taxable returns by \$819 million for tax year 2001. These credits include:

- Household Credit
- Earned Income Tax Credit
- Special Additional Mortgage Recording Tax Credit
- Real Property Tax Circuit Breaker Credit
- Accumulation Distribution Tax Credit
- Investment Credit
- Resident Credit (Taxes Paid to Other Jurisdictions)
- Child and Dependent Care Credit
- Empire Zone and Zone Equivalent Area Credits
- Farmers School Tax Credit
- Solar Electric Generating Equipment Credit
- Employment of Persons with Disabilities Credit
- Alternative Fuels Vehicles Credit
- Qualified Emerging Technology Company Credits
- Low Income Housing Credit
- Transportation Access Credit
- Industrial or Manufacturing Business Credit
- Residential Petroleum Tank Credit
- Qualified Empire Zone (QEZE) Credits
- College Tuition Credit
- Defibrillator Credit
- Green Buildings Credit

Table 8 summarizes the credits claimed by resident taxpayers in 2001.

Household Credit

All nondependent taxpayers with FAGI below \$28,000 (single) or \$32,000 (all others) may take the nonrefundable household credit. The credit ranges between \$20 and \$75 for single filers, with similar amounts for other filers and additional amounts for dependents. In 2001, 1.5 million resident taxpayers claimed the household credit, effectively reducing their tax liability by approximately \$67 million. Table 9 details the distribution of this credit by NYAGI.

Earned Income Tax Credit

For tax year 2001, certain taxpayers could claim an earned income tax credit (EITC) equal to 25 percent of the federal credit. The EITC is refundable to residents and nonrefundable to nonresidents. (For more information on the credit, see Office of Tax Policy Analysis, *Earned Income Tax Credit: Analysis of Credit Claims for 2001*.)

Table 10 shows that in tax year 2001, nearly 1.2 million New York residents claimed \$496 million in earned income tax credits. Approximately 95 percent of total credit claims were made on nontaxable returns, and thus constituted refunds, sometimes termed “negative taxes.” The amount of EITC claimed on taxable resident returns totaled nearly \$23 million (see Table 8 on page 19). Under the 2001 EITC structure, the credit increased with earned income to about \$10,000 for claimants with children; the credit remained flat as earned income increased until income exceeded \$13,090, and it phased out at higher income levels. As a result, the highest average credit amount for 2001 occurred in the \$8,000-\$12,000 earned income class. The amount of EITC which can be claimed must be reduced by any household credit amount used by the taxpayer.

Source: Office of Tax Policy Analysis, *Earned Income Tax Credit: Analysis of Credit Claims for 2001*

Other major credits include the resident credit and the child and dependent care credit. The resident credit for taxes paid to other jurisdictions totaled approximately \$616 million. The child and dependent care credit, claimed by 284,000 resident taxpayers, equaled approximately \$74 million. The amount of child and dependent care credit, resident credit, and household credit claimed in 2001 were all lower than the amounts claimed in 2000. This was partially attributable to a decline in the number of taxable returns filed.

Overpayments and Final Payments

The Department of Taxation and Finance is responsible for administering the local income taxes imposed by the city of New York and city of Yonkers. As a result, filers may attribute payments of tax (including overpayments) to both their State and local tax liabilities.

Of the approximately 5.7 million resident taxable returns, nearly 3.7 million had an average overpayment of State and/or city of New York/city of Yonkers taxes amounting to \$986. Thus, for about 64 percent of taxpayers, withholding by employers or estimated tax payments exceeded total tax liability. About 3.4 million taxpayers received all of their overpayment as refunds averaging \$628, while about 128,000 (mainly upper-income) taxpayers credited all of their overpayment, which averaged about \$5,278, toward their 2002 tax. (Approximately 166,000 taxpayers requested both refunds and credits averaging \$1,979 and \$2,975, respectively.) Approximately 2 million taxpayers owed an average of \$741 in State and local taxes when they filed their returns.

Nonresidents and Part-Year Residents

Nonresidents and part-year residents typically account for between 10 and 15 percent of all taxpayers and tax liability. Table 11 provides a summary of nonresident and part-year resident returns filed in 2001.

Table 11: Selected Tax Filing, Structure and Taxpayer Statistics for Nonresident and Part-Year Resident Taxable Returns in 2001

Filer	Total Number of Returns	Total Number of Taxpayers	Base Tax Before Proration (000)	Total Tax After Proration (000)	Average Tax Liability
Full-Year Nonresidents	619,348	538,238	\$7,761,671	\$3,118,132	\$5,793
Part-Year Residents	190,893	156,215	\$ 817,036	\$ 435,756	\$2,789

For full-year nonresidents, the ratio of final tax to base tax equaled about 40 percent (\$3,118 million/\$7,762 million). This means that, overall, 40 percent of nonresidents' New York adjusted gross income came from New York sources. For part-year residents, the corresponding figure equaled approximately 53 percent (\$436 million/\$817 million), the higher percentage reflecting New York-source income earned during their resident period.

Selected Historical Trends

This section provides analysis of recent statistical trends in certain tax provisions. This includes provisions for which usage or amounts have undergone important changes due to legal or economic developments.

Income Sources

Table 12 shows the pattern of resident taxpayers' long-term capital gains and retirement income (pensions, annuities, IRA distributions) between 1997 and 2001. Strong growth in capital gains income from 1997 to 2000 turned significantly negative in 2001 due to a substantial weakening of financial markets. Partnership, rent/royalty, and estate/trust income continued to grow in 2001, although at a reduced rate compared to recent years. Pension income decreased 6 percent in 2001 reversing a growth trend since 1997.

1998	35,532	19,782	15,430
1999	44,074	22,391	17,392
2000	57,301	24,976	19,637
2001	26,538	25,579	18,408

Subtraction Modifications

Table 13 shows resident taxpayers' use of major New York subtraction modifications to federal adjusted gross income between 1997 and 2001.

These include:

- 1) the full exemption of social security benefits subject to federal income tax;
- 2) the full exemption of interest on U.S. government obligations; and
- 3) the exclusion of up to \$20,000 of pensions and annuities for individuals age 59 ½ and over (up to \$20,000 each for qualifying married persons filing jointly).

Table 13 indicates that each of these major New York subtraction modifications declined in 2001. Declining levels of unearned or non-wage income to social security recipients in 2001 may have shifted benefits from federally taxable to non-taxable. This would result in a reduction in the modification for taxable social security benefits at the state level.

Table 13: Major Subtraction Modifications for Resident Taxpayers from 1997 Through 2001
(Millions of Dollars)

Tax Year	Social Security	U.S. Government Bond Interest	Pension and Annuity Exclusion
1997	4,153	2,418	4,180
1998	4,291	2,529	4,174
1999	4,723	2,343	4,801
2000	5,914	2,735	5,262
2001	5,592	2,523	4,684

Itemized Deductions

Table 14 shows taxpayers' average itemized deductions from 1997 through 2001. Absent major law changes, average itemized deductions generally increase from year to year due to increases in incomes (e.g., charitable giving usually rises with income) or due to the indirect effects of increasing costs (e.g., property taxes generally rise as the cost of schools and local government increases). The average deduction for property taxes paid has not grown significantly since 1997. This is largely due to the State School Tax Reduction Program (known as the STAR program) which has reduced property tax bills since becoming effective in 1998.

The sizable increase in the average deduction for charitable contributions from 1997 to 2000 in part reflected the strong income growth (especially capital gains) for higher-income taxpayers, who likely increased contributions accordingly. However, due to a decline in the number of taxable returns and an increase in the standard deduction for married taxpayers in 2001, each of these categories of average itemized deduction experienced decreases in 2001 compared to 2000.

Table 14: Average Major Itemized Deductions for Resident Taxpayers from 1997 Through 2001 (Dollars)

Tax	Taxes*	Contributions	Interest	Medical
1997	5,654	5,219	11,455	4,788

Note: Amounts reflect deductions "claimed" not "allowed," because limitations on itemized deductions reduced the overall value of deductions claimed.

Focus on Nontaxable Returns

As a result of tax reductions that have been enacted since the mid-1990s, many more returns are now filed by persons who do not owe tax, but file to claim refundable tax credits. Tax reductions enacted which have increased the number of nontaxable returns filed over this period include large increases in standard deduction amounts, enhancement of the refundable earned income tax credit (EITC) which first took effect in 1994, significant increases in the child and dependent care credit for lower-income taxpayers, and the establishment of a refundable “farmer’s school tax credit” effective in tax year 1997.

This section provides an overview of nontaxable returns (either zero tax or refundable credits) filed for the 2001 tax year.

Overview of Tax Years 1997 Through 2001

Tables 15-19 focus on the (generally negative) tax liabilities of nontaxable returns by NYAGI class from 1997 to 2001. “Negative tax liabilities” refer to filers who receive refundable credits in excess of their pre-credit tax liability. Higher negative liabilities and negative effective tax rates correspond with higher amounts of refundable credits which benefit filers who claim them.

Table 15 and Figure 5 show that the number of nontaxable resident returns increased slightly from 1997 to 2001. Figure 6 illustrates how total credits increased dramatically from \$356 million in 1997 to \$697 million in 2001 primarily due to the increase in the earned income credit rate in 2000 and 2001 annual enhancements to the child care credit from 1997 to 2000. Correspondingly, the overall effective tax rate on nontaxable returns dropped from -1.9 percent in 1997 to -3.0 percent in 2001 as indicated on Table 15.

Table 16 provides detail on claims for each of the major credits for tax years 1997 through 2001. The earned income tax credit has grown significantly since 1997 due to statutory increases at both the State and federal levels. Because no law changes occurred, the household and real property tax credits remained fairly constant. Finally, the child care credit rose markedly from 1997 to 2000 due to legislation enhancing the credit for lower-income filers and continued to grow significantly in 2001. The significant growth in other credits is attributable to a large increase in other refundable credits claimed.

Usage of Modifications – 2001

Table 17 shows major subtraction modifications on nontaxable returns. These subtractions reduced federal adjusted gross income of \$26.2 billion by \$12.0 billion in total.

Usage of Deductions – 2001

Table 18 shows that standard and itemized deductions totaled over \$15.2 billion, reducing most of the \$19.0 billion of NYAGI subject to tax. Note that the total deductions used was \$3.8 billion less than NYAGI, because many filers with dependent exemptions did not need to use the full amount of their deductions to reduce their taxable income to zero.

* Does not include additional credits claimed on "stand alone" IT-214 forms filed by persons not required to file regular tax returns.

** Total number of credits claimed. Some filers claim more than one credit.

Note: "Other" credits include the resident credit, farmers' school tax credit, various business credits, and other refundable and non-refundable credits listed on Form IT-201-ATT.

Tables Accompanying This Report

The remainder of this publication contains two sections of statistical tables displaying significant features of New York State taxpayers for the 2001 tax year. Section 1 (tables 20 through 36) depicts distributions of resident, nonresident and part-year resident taxable returns classified by New York adjusted gross income or New York-source income. Summary information only is provided for nonresidents and part-year residents. Section 2 (tables 37 through 56) displays selected tax components by filing status for resident taxable returns. In addition, a brief overview of fiduciary returns, which are not otherwise included in the study, begins on page 91.

2001 Fiduciary Returns

In addition to tax returns filed by individual taxpayers, fiduciaries of estates and trusts are also required to file returns and pay the personal income tax. “Fiduciaries” are persons responsible for paying the tax of either the estates of deceased taxpayers, or of trusts. The latter consists of entities, such as charitable foundations, with income subject to tax.

The tax rates for estates and trusts are the same as for single individuals. Like the regular income tax, the base is generally based on federal amounts, before certain modifications and adjustments. Fiduciaries file on Form IT-205.

Table 57 shows that approximately 55,000 resident estates and trusts had 2001 tax liability of approximately \$183.4 million. Approximately 1,600 nonresident and part-year resident estates and trusts paid \$10.7 million in tax. In total, Table 57 shows that 56,501 fiduciary returns had total tax liability after credits of \$194.3 million.

The data in Table 57 are based on all fiduciary returns received for the 2001 tax year. This differs from data in the remainder of this report, which come from a sample of regular tax returns.

Appendix A: Glossary of Terms

Federal Adjusted Gross Income (FAGI)

The amount of income earned or received during the income year after certain exclusions and adjustments. Major exclusions from gross income include many government transfer payments, employer-provided pension contributions and fringe benefits, most capital gains from the sale of a primary residence, and a portion of social security benefits. Major adjustments to gross income include deductions for individual retirement arrangements, alimony paid, employee moving expenses, and one-half of self-employment tax paid.

New York Adjusted Gross Income (NYAGI)

The amount of federal adjusted gross income earned or received during the income year after certain modifications and before the subtraction of either the standard or itemized deductions, and dependent exemptions. For example, New York State income tax refunds, included in FAGI, are subtracted in determining NYAGI. Also, certain pension and annuity income is subtracted from FAGI in arriving at NYAGI, as is interest on U.S. government bonds. On the other hand, taxpayers must add interest income from other states' debt obligations to FAGI when determining their NYAGI.

Nonresidents and part-year residents use the ratio of New York-source NYAGI to federal-source NYAGI as the basis for allocating their tax liability to reflect income from New York sources. Generally, this is limited to wages and other income from performing services or conducting a trade or business in New York, and gains from the sale of real property located in New York. Also, New York-source modifications include those modifications which relate to income from New York sources. However, federal-source NYAGI is used in the sampling of nonresident and part-year resident returns, and in the distributional analysis of these taxpayers.

Some major differences exist between income defined for tax purposes and the personal income series for New York published by the U.S. Department of Commerce's Bureau of Economic Analysis. Personal

income is more comprehensive in that it includes most federal exclusions from income, such as:

- a) tax-exempt interest;
- b) workers compensation benefits;
- c) payments in kind;
- d) public assistance transfer payments;
- e) social security benefits; and
- f) imputed income (e.g., the estimated rental value of owner occupied housing).

On the other hand, personal income is limited to New York State residents and does not include capital gains. Income defined for tax purposes includes both certain income earned by nonresident taxpayers, and capital gains.

Forms

Short Forms: IT-100 and IT-200, used by resident taxpayers who have limited income sources, use the standard deduction, and make limited use of credits.

Long Forms: IT-201 and IT-203, used by taxpayers reporting income from several sources, making adjustments to income, claiming itemized deductions, and/or using several credits. Nonresidents and most part-year residents use the long form IT-203, which is similar to the IT-201 used by resident taxpayers.

Nontaxable Returns

A return with no tax liability, or a negative tax liability resulting from refundable credits.

Nonresident

A taxpayer who is not a resident for the entire tax year.

Part-Year Resident

A taxpayer who changes from a resident to a nonresident, or from a nonresident to a resident, during the tax year.

Return

Income tax forms IT-100, IT-200, IT-201, and IT-203. A husband and wife filing a joint return are considered to be one taxpayer.

Taxable Return

A return with any amount of positive tax liability.

Taxable Year

The annual period for which the taxpayer computes income earned or received. This study includes tax returns filed for the calendar year 2001 and fiscal years ending before February 1, 2002.

Tax Liability

For residents, the amount of tax is based on New York taxable income. The tax is computed by subtracting allowable deductions and exemptions from New York adjusted gross income, and multiplying the remainder by the appropriate New York State tax rate schedule. The result, minus the amount of allowable credits, equals tax liability. "Negative tax liability" refers to the amount of refundable credits received by persons who otherwise have a zero tax liability.

The computation for full-year nonresidents and part-year residents is different. They first compute their base tax through the applicable tax rate schedule and subtraction of the household, earned income, and dependent care credits. They then multiply this after-credit liability by the ratio of New York-source NYAGI to total NYAGI to arrive at a prorated tax. After subtracting other, refundable credits, final New York tax liability results.

Taxpayer

An individual or married couple who files a return with some amount of positive tax liability. When married couples file separate returns, each spouse constitutes a taxpayer.

Appendix B: Description of the Sample

The study does not fully account for total tax liability as shown in collection data. It is based on timely filed returns for the current year and does not include late or delinquent returns, or those delayed by audit or processing factors. Timely filed returns are those filed by April 15th or, where extensions are granted, by the extension due date. Also excluded are fiduciaries on form IT-205.

Data in this report are based on a sample of nearly 128,000 personal income tax returns of all types, selected from a total of approximately 9 million returns. The sample includes both taxable and nontaxable returns, but data in this report primarily relate to those with some State income tax liability. The sample is based on New York adjusted gross income and drawn according to the ratios shown in Table B-1. The sampling ratio is defined as the selection of one out of every “n” returns. For example, the following table shows that for IT-100 returns with income between \$75,000 and \$100,000, 1 out of every 59 returns was selected.

* The income classifier for IT -100, IT -200 and IT -201 returns is NY Adjusted Gross Income.
The income classifier for IT -203 returns is Federal amount of NY Adjusted Gross Income.

A sample is conducted to eliminate the need to tabulate components of income and deductions from all of the approximately 9 million tax returns. However, a sample produces the undesirable effect of a sampling error. This error can be reduced by stratifying the sample. As in past years, the sample was stratified by income class and return type for resident and nonresident returns. The long-form returns IT-201 and IT-203 were additionally stratified by deduction status: standard or itemized. The IT-203 returns were further stratified by full-year nonresidents and part-year residents. Also, the income classifier for IT-203 returns is federal-source NYAGI.

The sampling error depends not only on the sample size, but also on the allocation of the sample to the different strata of income classes and return types. For the 2001 study, the allocation of the sample was computed according to statistical principles which minimized the sample size while maintaining or improving the precision of estimation of total income, tax liability and six of the most important federal components of income in comparison to past studies. In general, the sampling plan requires the proportion of returns to be sampled to increase with income.
