Statistical Highlights of 2009 Returns

Summary

Highlights from tax year 2009 personal income tax returns include:

Total federal adjusted gross income (FAGI) of resident taxpayers (returns with positive tax liability) for 2009 equaled approximately \$520 billion, a decrease of \$55 billion (9.5 percent) from 2008. New York adjusted gross income (NYAGI) totaled \$501 billion compared to \$552 billion in 2008.

Total State income tax liability of residents, nonresidents, and part-year residents filing taxable returns equaled approximately \$32.6 billion, a decrease of 0.8 percent from 2008. Full-year resident taxpayers accounted for \$27 billion, or 84 percent of total tax.

Average tax liability per taxable full-year resident return equaled \$4,868 up from \$4,782 in 2008.

Total tax liability of taxable resident returns, as a percentage of NYAGI, increased from 5.0 percent in 2008 to 5.5 percent in 2009.

The total number of tax returns filed with the Department of Taxation and Finance in 2009 totaled approximately 9.5 million, nearly 1 percent less than the number filed in 2008. About 3 million of these were “nontaxable” returns with no tax liability, or a negative tax liability resulting from refundable credits. The number of taxable returns decreased from 6.6 million to 6.4 million, with resident returns accounting for 88 percent of this total. The decreases in total returns filed and taxable returns are mainly attributable to weak economic conditions in 2009.

Introduction and Background

This publication contains findings from a study of 2009 personal income tax returns filed during 2010. To aid the reader in interpreting the contents of this report, several key definitions and descriptions appear in Appendix A. It is particularly important to note that the term “taxpayer” means an individual, or married couple filing jointly, who files a return indicating a positive tax liability. By this definition, the terms “taxpayers” and “taxable returns” are interchangeable.

This study contains statistics based on a stratified sample of approximately 764,000 personal income tax returns selected from a total filing population of over 9.5 million returns, approximately 8.6 million of which were filed by New York State full-year residents. Both taxable and nontaxable returns were sampled. However, this report primarily provides statistics on 6.4 million resident, part-year resident, and nonresident returns with a New York personal income tax liability.

The study contains information required to compute tax liability or tax owed by taxpayers on timely filed returns for the 2009 tax year. The information reflects corrections for computational or minor errors but does not account for subsequent audits or amendments that may occur after initial processing. Therefore, the data contained in the report do not reflect final 2009 liability for all returns. The concept of tax liability differs from tax collections. Actual tax collections during the State fiscal year (April 1 through March 31) include receipts of various types of payments made to satisfy taxpayers’ tax liability including withholding, estimated payments, final payments, refunds, audit payments, and payments from delinquent accounts. Personal income tax collection data are presented in the annual *New York State Tax Collections* statistical report prepared by the Office of Tax Policy Analysis (OTPA).

This report describes the prominent features of New York’s personal income tax with particular emphasis on the 2009 tax year. It also includes taxpayer profiles consisting of number of taxable returns, sources of income, federal adjustments, New York modifications, deductions, dependent exemptions, tax liability and credits by NYAGI class, filing status, and return type. In addition, it includes separate sections on income, itemized deduction amounts, exemptions, available credits, and information on refundable credits. Finally, it compares statistics for 2009 with those from the prior year for most of these items. Appendix C includes the major tax forms which taxpayers filed for tax year 2009.

The statistical tables accompanying this report cover resident, part-year resident, and nonresident returns. The “Statistical Summary” section focuses on resident returns because the data for nonresidents and part-year residents are not comparable to data from resident returns. Amounts of income, deductions, and credits reported on nonresident and part-year resident returns are not comparable to those amounts on resident returns because they represent gross amounts before allocation of the base tax to reflect the New York-source portion of total federal gross income. The report also includes a description and statistical information from returns filed by fiduciaries of estates and trusts.

Comparison With Other OTPA Reports

The aggregate statistics reported in this publication do not completely coincide with data presented in the *New York Adjusted Gross Income and Tax Liability, Analysis of State Personal Income Tax Returns by Place of Residence (POR)* publication also prepared by OTPA. The data provided in this report are based on a statistically valid sample of approximately 764,000 personal income tax returns selected from a population of 9.5 million returns. OTPA staff reviewed taxpayer entries, inserted missing data, corrected data and recomputed subtotals. (See Appendix B for a more complete description of the sample). Using either the number of tax returns, adjusted gross income, or tax liability data for each sample cell, the sample was inflated to represent all timely filed 2009 State personal income tax returns. In comparison, the POR publication tabulates information from all returns filed with the Department of Taxation and Finance (the Department). The POR report represents the compilation of records on the Department’s master file on a particular day. The data variables represent amounts accepted by the Department’s tax return processing system within system tolerances. Analysts compiled the data and reported the statistics with minimal review. Furthermore, the report covers only some of the information contained on New York State income tax returns. In addition to the POR report, the Office of Tax Policy Analysis also produces special legislatively mandated studies on the earned income tax credit and real property tax credits.

Prominent Features

New York automatically conforms to most federal definitions of income and itemized deductions. Therefore, some of the tables contained in this study refer to federal components of income and federal components of deductions, the starting point for State computations. New York has historically been automatically conformed to federal adjusted gross income. Like most other states which similarly conform, New York modifies federal adjusted gross income for various reasons. These modifications include exemptions for certain pensions and social security, and interest on federal obligations (which federal law precludes states from taxing).

Table 1 highlights the major provisions of New York's 2009 personal income tax law.

Table 1: Selected Provisions of New York State Personal Income Tax Structure – 2009 Tax Year

Social Security Benefits	Fully Exempt
Pension Income	New York State and local and federal pensions fully exempt; others eligible for up to \$20,000 exclusion (\$20,000 each spouse for married couples).
Married Standard Deduction	\$15,000
Head of Household Standard Deduction	\$10,500
Single Standard Deduction	\$7,500
Dependent Filer Standard Deduction	\$3,000
Itemized Deductions	Federal amount (after limitation*) minus deduction for state and local income tax. Upper-income taxpayers must further reduce itemized deductions by up to 50 percent. The use of itemized deductions is completely eliminated, except for 50 percent of charitable contributions, for taxpayers with more than \$1 million of NYAGI.
Dependent Exemption Amount	\$1,000
Tax Treatment of Married Taxpayers	Joint rate schedule with full income splitting.
Minimum Tax	Add-on tax equal to 6 percent of certain federal tax preference items, minus deductions of \$5,000 and regular tax.

*Taxpayers with federal AGI of \$166,800 or more (\$83,400 for married filing separately) must reduce their itemized deductions by 3 percent of the amount by which their AGI exceeds these amounts. The reduction does not apply to deductions for medical expenses, casualty and gambling losses, and investment interest expense, and it cannot reduce deductions subject to the limitation by more than 80 percent. For 2009, this limitation is reduced by two-thirds.

New York has a graduated rate structure in which tax rates increase as taxable income increases. Table 2 shows the 2009 tax rate schedule. The top two tax rates and brackets were temporarily added for tax years 2009 through 2011. In addition, these rates include a temporary supplemental tax. The supplemental tax described in Table 2 causes certain upper-income taxpayers to lose the benefit of lower tax rates below the top rate.

This effectively means that these taxpayers paid a flat tax of 8.97 percent on all of their taxable income when their New York adjusted gross income exceeded \$550,000. However, certain credits which decline in value as income rises help make the tax progressive. On the other hand, New York permits most federal itemized deductions, which tend to diminish progressivity. Federal and State limitations on itemized deductions reduce some of this effect.

500,000	Over	\$36,187 plus 8.97% of amount over \$500,000

Supplemental Tax: A supplemental income tax for the purpose of recapturing the benefits conferred to taxpayers through tax brackets with rates lower than the maximum rate applies to all taxpayers with New York adjusted gross income (NYAGI) over \$100,000. The benefit of the lower brackets begins to be recaptured at \$100,000 of NYAGI and is totally recaptured at \$150,000 for taxpayers with taxable income in the 6.85 percent bracket. For taxpayers with taxable income in the 7.85 percent bracket, the recapture of rates below the 7.85 percent bracket begins when NYAGI is \$300,000 and is completed when NYAGI equals \$350,000. The recapture of rates below the highest rate begins when NYAGI is \$500,000 and is completed when NYAGI equals \$550,000. Once taxpayers New York adjusted gross income exceeds \$550,000, all of their taxable income becomes effectively subject to a flat 8.97 percent rate.

Nonresidents and part-year residents first compute a base tax as if they were residents. This means that they start with their total federal adjusted gross income (FAGI) and take the full amounts of modifications, deductions, exemptions and credits to compute a base tax. However, to ensure that they do not pay tax on non-New York income they must then multiply this base tax by an income percentage.

This is the ratio of “New York-source” New York adjusted gross income (NYAGI) to total (“sourced” plus “unsourced”) NYAGI. For nonresidents, New York-source income generally consists of:

- 1) wages earned in New York;
- 2) income derived from business carried on in New York; and
- 3) gains from the sale of New York real property and business property.

New York-source income for part-year residents consists of these income sources for their nonresident period, plus income from all sources for their resident period.

Statistical Summary

The personal income tax accounted for approximately 63 percent of New York State tax revenues collected by the Department of Taxation and Finance during SFY 2009-10. Approximately 8.6 million returns were timely filed by full-year residents for tax year 2009, of which 3.0 million had no tax liability. These nontaxable returns generally entailed requests for refunds of taxes withheld by employers and refundable tax credits. The remaining 5.6 million taxable returns reported a total tax liability of \$27.3 billion. In addition, approximately 778,000 nonresidents and part-year residents had tax liability of \$5.3 billion and another 160,500 filed nontaxable returns.

Table 3 summarizes and compares information from taxable returns filed by residents in 2008 and 2009. In 2009, total New York adjusted gross income (NYAGI) equaled approximately \$501 billion, compared with approximately \$520 billion in total federal adjusted gross income (FAGI). The \$19 billion difference resulted from the excess of State subtraction modifications to federal adjusted gross income over addition modifications to FAGI. Major New York subtraction modifications include certain pension and annuity income, interest income derived from federal bonds, federally taxable refunds of State and local income taxes, and the portion of social security benefits subject to federal income tax. The major New York addition modifications are interest from obligations of states other than New York and public employee retirement contributions. Appendix A provides more detailed income definitions.

Table 3 indicates that while NYAGI decreased by 9.2 percent in 2009 compared to 2008, tax liability decreased from \$27.5 billion to \$27.3 billion, or 0.7 percent. The smaller rate of decrease in tax liability compared to income is a result of the temporary increase in the personal income tax rates that took effect in 2009.

Distribution of Taxpayer Income and Tax Liability

Table 4 compares the distribution of taxpayers, income, and tax liability in 2008 and 2009. It shows that in 2009, while taxpayers with incomes above \$200,000 made up a smaller share of total income compared to 2008, their share of total tax liability remained constant. This is a result of the temporary higher income tax rates in effect in 2009. There was also a decrease in the share of taxpayers with incomes above \$200,000 due to income decline for high income taxpayers. Figure 1 depicts the distribution of these items in tax year 2009.

Table 5 and Figure 2 on the following page provide distributional analysis based on deciles of taxpayers. They indicate that the 10 percent of taxpayers with the lowest incomes had 1.0 percent of all income and paid 0.3 percent of all tax. In contrast, the 10 percent of taxpayers with the highest incomes had 48.4 percent of all income and paid 63.0 percent of all tax. The increasing effective tax rate, especially for the top decile, illustrates the progressive structure of the tax. The median income for taxpayers equaled \$48,888. Taxpayers below the median had 15.0 percent of total NYAGI and paid 7.7 percent of total tax, while those above the median bore 92.3 percent of the tax burden.

Reflecting the downturn in the State's economy, total federal gross income decreased 9.5 percent in 2009. Substantial reductions in non-wage income, especially interest, dividends and capital gains were the main engines of decline. In addition, wages and salaries decreased by 4.8 percent for the year. Figure 3 depicts the overall distribution of components of federal gross income. Wages and salaries comprised the largest single income component accounting for 71 percent of federal gross income in 2009. This is larger than the 68 percent share for wages in 2008. Conversely, the share of federal gross income comprised of non-wage income decreased from 32 percent to 29 percent.

Standard and Itemized Deductions

Approximately 69 percent of resident taxpayers used the standard deduction in 2009. Over 1.7 million taxpayers claimed itemized deductions worth \$44.6 billion, compared to \$49.0 billion in the previous year.

Table 7 shows that the deduction for taxes paid was the most often claimed New York State itemized deduction, followed closely by deductions for charitable contributions and interest paid. Furthermore, the deduction for interest paid was the largest single itemized deduction totaling \$19.9 billion in 2009. Taxes paid and charitable contributions were also significant with resident taxpayers claiming over \$24.0 billion for these itemized deductions combined. Figure 4 illustrates the percent of gross itemized deduction before limitation by type of deduction for resident taxpayers in 2009.

1/ Primarily includes real property taxes. Federal deductions for New York State and local income taxes and certain other federal deductions (e.g., interest expense relating to items exempt from tax in New York) totaling \$22.4 billion were not allowed on State returns.

2/ Includes deductions for miscellaneous expenses and casualty/theft losses. Number claiming includes taxpayers claiming at least one of these deductions.

3/ Also includes minor corrections.

4/ Limitations are the federal limitation to which New York conforms, and the New York itemized deduction adjustment. Therefore, the data items refer to taxpayers who actually itemized deductions, after limitations and adjustments. Note also that columns are not additive, because of the limitations and because most taxpayers used more than one deduction.

As described in Table 1 on page 5, the federal itemized deduction limitation, to which New York conforms, requires upper-income taxpayers to reduce certain itemized deductions. Federal law reduced the itemized deduction limitation by two-thirds in 2009. Because this reduction applies against all deductions subject to it, its effect on particular deductions cannot be computed. In addition, the New York itemized deduction adjustment reduced itemized deductions by an additional amount. The combined effect of the federal limitation and New York itemized deduction adjustment reduced total itemized deductions by \$7.9 billion, to \$44.6 billion. Like the federal limitation, the New York adjustment applies to aggregate itemized deductions, so its effect on any particular deduction cannot be calculated. Figure 4 shows the distribution of itemized deductions prior to these limitations.

Figure 4: Percent of Gross Itemized Deductions Before Limitations by Type for Resident Taxpayers in 2009

Dependent Exemptions

The value of dependent exemptions claimed by resident taxpayers in 2009 totaled nearly \$3.2 billion, an amount similar to what was claimed in 2008. In fact, this amount has remained fairly constant since 1995. Approximately 1.9 million taxpayers claimed at least one dependent exemption.

Credits

The income tax contains a number of credits which reduce the total tax due dollar for dollar. Collectively, these credits reduced liability on taxable returns by \$1,878 million for tax year 2009. The following credits were available in 2009:

- Resident Credit (Taxes Paid to Other Jurisdictions)
- Empire State Child Credit
- Household Credit
- Child and Dependent Care Credit
- Earned Income Tax Credit
- College Tuition Credit
- Alternative Fuels Credits
- Clean Heating Fuel Credit
- Conservation Easement
- Biofuel Production Credit
- Handicapped Accessible Taxicabs and Livery Service Credit
- Security Officer Training Credit
- Special Additional Mortgage Recording Tax Credit
- Real Property Tax Circuit Breaker Credit
- Accumulation Distribution Tax Credit
- Investment Credit
- Investment Credit for Financial Services Industry
- Empire Zone and Zone Equivalent Area Credits
- Farmers' School Tax Credit
- Solar and Fuel Cell Electric Generating Equipment Credits
- Employment of Persons with Disabilities Credit
- Qualified Emerging Technology Company Credits
- Low Incoming Housing Credit
- Empire State Film Production Credit
- Qualified Empire Zone (QEZE) Credits
- Defibrillator Credit
- Green Buildings Credit
- Long-Term Care Insurance Credit
- Brownfield Credits
- Nursing Home Assessment Credit
- Special Additional Mortgage Recording Tax Credit
- Rehabilitation of Historic Homes and Historic Properties Credits
- Volunteer Firefighters and Ambulance Worker Credits
- Empire State Commercial Production Credit

Table 8 summarizes the credits claimed by resident taxpayers in 2009.

Household Credit

All nondependent taxpayers with FAGI below \$28,000 (single) or \$32,000 (all others) may take the nonrefundable household credit. The credit ranges between \$20 and \$75 for single filers, with similar amounts for other filers and additional amounts for dependents. In 2009, over 1.1 million resident taxpayers claimed the household credit, effectively reducing their tax liability by approximately \$47 million. Table 9 details the distribution of this credit by NYAGI class.

Earned Income Tax Credit

For Tax year 2009, certain taxpayers could claim an earned income tax credit (EITC) equal to 30 percent of the federal credit. EITC is refundable to residents and nonrefundable to nonresidents. (For more information on the credit, see Office of Tax Policy Analysis, *Earned Income Tax Credit: Analysis of Credit Claims for 2009*).

Table 10 shows that in tax year 2009, 1.5 million New York residents claimed \$958 million in earned income tax credits. This does not include claims of the separate earned income tax credit for non-custodial parents. Approximately 97 percent of the total credit claimed was on nontaxable returns. A portion of the credit claimed on these returns constituted refunds, sometimes termed “negative taxes.” The amount of EITC claimed on taxable resident returns totaled \$32.3 million (see Table 8 on page 17). Under the 2009 EITC structure, the credit increased with earned income up to \$12,570 for claimants with children and then remained flat as earned income increased until it exceeded \$21,420 for married and \$16,420 for others. The credit phased out at higher income levels. As a result, the highest average credit amount for 2009 occurred in the \$12,000—\$16,000 earned income class. The amount of EITC which can be claimed must be reduced by any household credit amount used by the taxpayer.

Other major credits claimed by resident taxpayers include the resident credit, the Empire State child tax credit, and the child and dependent care credit. The resident credit for taxes paid to other jurisdictions totaled approximately \$1.14 billion. The child and dependent care credit, claimed by 299,000 resident taxpayers, equaled approximately \$71.3 million. The number of taxable returns decline by 2.5 percent in 2009 compared to 2008. Total credits claimed by resident taxpayers increased from \$1,871 million in 2008 to \$1,878 million in 2009, or 0.4 percent.

Overpayments and Final Payments

The Department of Taxation and Finance is responsible for administering the local income taxes imposed by the city of New York and city of Yonkers. As a result, filers may attribute payments of tax (including overpayments) to both their State and local tax liabilities.

Of the approximately 5.6 million resident taxable returns, 3.9 million had an average overpayment of State and/or city of New York/city of Yonkers taxes amounting to \$1,421. Thus, for about 70 percent of taxpayers, withholding by employers and/or estimated tax payments exceeded total tax liability. About 3.7 million taxpayers received all of their overpayment as refunds averaging \$961, while about 57,000 (mainly upper-income) taxpayers credited all of their overpayment, which averaged about \$6,614, toward their 2010 tax. (Approximately 133,000 taxpayers requested both refunds and credits averaging \$2,921 and \$9,215, respectively.) Approximately 1.6 million taxpayers owed an average of \$1,257 in State and local taxes when they filed their returns.

Nonresidents and Part-Year Residents

Nonresidents and part-year residents typically account for between 10 and 15 percent of all taxpayers and tax liability. Table 11 provides a summary of nonresident and part-year resident returns filed in 2009. For full-year nonresidents, the ratio of final tax to base tax equaled approximately 33 percent (\$4,753 million/\$14,504 million). This means that, overall, 33 percent of nonresidents' New York adjusted gross income came from New York sources. For part-year residents, the corresponding figure equaled approximately 63 percent (\$534 million/\$846 million), the higher percentage reflecting New York-source income earned during their resident period.

Selected Historical Trends

This section provides analysis of recent statistical trends in certain tax provisions. This includes provisions for which usage or amounts have undergone important changes due to legal or economic developments.

Income Sources

Table 12 shows the pattern of resident taxpayers' long-term capital gains, retirement income (pensions, annuities, IRA distributions), and partnership, rent and estate/trust income between 2005 and 2009. Net capital gain income fell significantly in 2009 declining over 76 percent from the high in 2007. Partnership, rent and estate/trust income, in addition to retirement income, also declined reversing the steady growth experienced from 2005 to 2008.

Table 12: Capital Gains, Net Income from Partnerships and Retirement Income for Resident Taxable Returns from 2005 Through 2009 (Millions of Dollars)

2005	\$55,584	\$35,413	\$20,609
2006	72,303	38,955	23,333
2007	105,627	44,408	24,941
2008	46,639	48,969	25,324
2009	25,002	45,593	21,626

Subtraction Modifications

Table 13 shows resident taxpayers' use of major New York subtraction modifications to federal adjusted gross income between 2005 and 2009.

These include:

- 1) the full exemption of social security benefits subject to federal income tax;
- 2) the full exemption of interest on U.S. government obligations; and
- 3) the exclusion of up to \$20,000 of pensions and annuities for individuals age 59 ½ and over (up to \$20,000 each for qualifying married persons filing jointly).

Table 13 indicates that subtraction modifications for social security benefits, the pension and annuity exclusion, and the exemption of interest on U.S. Government obligations claimed as a subtraction modification all decreased in 2009.

Table 13: Major Subtraction Modifications for Resident Taxpayers from 2005 Through 2009

2006	7,776	2,185	5,833
2007	8,279	2,831	6,317
2008	8,273	1,699	6,159
2009	7,918	1,009	5,084

Itemized Deductions

Table 14 shows taxpayers' average itemized deductions from 2005 through 2009. Absent major law changes, average itemized deductions generally increase from year to year due to increases in incomes (e.g., charitable giving usually rises with income) or due to the indirect effects of increasing costs (e.g., property taxes generally rise as the cost of schools and local government increases). However, the State School Tax Reduction (STAR) program has helped to offset increases in the average deduction for property taxes paid.

The average itemized deduction for each category rose strongly over the period 2005 to 2007. These increases were a result of higher mortgage interest payments, the increased cost of medical and dental services, and strong income growth for high-income taxpayers, who likely increased contributions accordingly. However, due to a decline in the number of taxable returns resulting from the economic recession, each of the categories of average itemized deduction, except for the taxes paid deduction, experienced decreases in 2009 compared to 2008.

Table 14: Average Major Itemized Deductions for Resident Taxpayers from 2005 Through 2009 (Dollars)

Tax Year	Taxes*	Contributions	Interest	Medical
2005	\$7,342	\$7,536	\$13,553	\$6,112
2006	7,226	8,394	15,223	6,368
2007	8,059	9,321	16,789	6,886

Note: Amounts reflect deductions "claimed" not "allowed," because limitations on itemized deductions reduced the overall value of deductions claimed.

Focus on Nontaxable Returns

As a result of tax credits enacted and enhanced in recent years, many more returns are now filed by persons who do not owe tax, but file to claim refundable tax credits. Tax changes which have increased the number of nontaxable returns include enhancements to the refundable earned income tax credit (EITC), significant increases in the child and dependent care credit for lower-income taxpayers, and the establishment of the Empire State child tax credit and other new credits.

This section provides an overview of nontaxable returns (either zero tax or refundable credits) filed for the 2009 tax year.

Overview of Tax Years 2005 Through 2009

Tables 15-19 focus on the (generally negative) tax liabilities of nontaxable returns by NYAGI class from 2005 to 2009. “Negative tax liabilities” refer to filers who receive refundable credits in excess of their pre-credit tax liability. Higher negative liabilities and negative effective tax rates correspond with higher amounts of refundable credits which benefit filers who claim them.

Table 15 and Figure 5 show that the number of nontaxable resident returns increased from 2.6 million in 2005 to approximately 3.0 million in 2009. Figure 6 illustrates how total credits increased robustly from \$1.2 billion in 2005 to over \$1.8 billion in 2009. This was primarily due to the establishment of the Empire State child tax credit in 2006, multi-year increases in earned income credit claims through 2009, enhancements to the federal child care credit beginning in 2003, and growth in other credits such as the qualified empire zone credits. Correspondingly, the overall effective tax rate on nontaxable returns dropped from -3.7 percent in 2005 to -4.3 percent in 2009 as indicated on Table 15.

Table 16 provides detail on claims for each of the major credits for tax years 2005 through 2009. Total credits claimed by nontaxable resident returns increased from \$1.6 billion in 2008 to \$1.8 billion in 2009. This was attributable to increases in the earned income credit and other credits. Because no law changes occurred, the household credit remained fairly constant. The child care credit experienced a large decline from 2008 to 2009.

Usage of Modifications - 2009

Table 17 shows major subtraction modifications on nontaxable returns. These subtractions reduced federal adjusted gross income of \$39.6 billion by \$20.1 billion in total.

Usage of Deductions - 2009

Table 18 shows that standard and itemized deductions totaled \$22.4 billion, reducing a substantial portion of the \$32.5 billion of NYAGI subject to tax. Note that the total deductions used was \$10.1 billion less than NYAGI, because many filers with dependent exemptions or sizeable credit claims did not need to use the full amount of their deductions to reduce their tax liability to zero.

Tables Accompanying This Report

The remainder of this publication contains two sections of statistical tables displaying significant features of New York State taxpayers for the 2009 tax year. Section 1 (tables 20 through 36) depicts distributions of resident, nonresident and part-year resident taxable returns classified by New York adjusted gross income or New York-source income. Summary information only is provided for nonresidents and part-year residents. Section 2 (tables 37 through 56) displays selected tax components by filing status for resident taxable returns. In addition, a brief overview of fiduciary returns, which are not otherwise included in the study, begins on page 89.

2009 Fiduciary Returns

In addition to tax returns filed by individual taxpayers, fiduciaries of estates and trusts are also required to file returns and pay the personal income tax. “Fiduciaries” are persons responsible for paying the tax of either the estates of deceased taxpayers, or of trusts. The latter consists of entities, such as charitable foundations, with income subject to tax.

The tax rates for estates and trusts are the same as for single individuals. Like the regular income tax, the base is generally based on federal amounts, before certain modifications and adjustments. Fiduciaries file on Form IT-205.

Table 57 shows that 38,033 resident estates and trusts had 2009 tax liability of approximately \$157 million. In addition, over 2,600 nonresident and part-year resident estates and trusts paid approximately \$36 million in tax. In total, Table 57 shows that 40,601 fiduciary returns had total tax liability after credits of \$193 million.

The data in Table 57 are based on all fiduciary returns received for the 2009 tax year. This differs from data in the remainder of this report, which come from a sample of regular tax returns.

Appendix A: Glossary of Terms

Federal Adjusted Gross Income (FAGI)

The amount of income earned or received during the income year after certain exclusions and adjustments. Major exclusions from gross income include many government transfer payments, employer-provided pension contributions and fringe benefits, most capital gains from the sale of a primary residence, and a portion of social security benefits. Major adjustments to gross income include deductions for individual retirement arrangements, alimony paid, employee moving expenses, and one-half of self-employment tax paid.

New York Adjusted Gross Income (NYAGI)

The amount of federal adjusted gross income earned or received during the income year after certain modifications and before the subtraction of either the standard or itemized deductions, and dependent exemptions. For example, New York State income tax refunds, included in FAGI, are subtracted in determining NYAGI. Also, certain pension and annuity income is subtracted from FAGI in arriving at NYAGI, as is interest on U.S. government bonds. On the other hand, taxpayers must add interest income from other states' debt obligations to FAGI when determining their NYAGI.

Nonresidents and part-year residents use the ratio of New York-source NYAGI to federal-source NYAGI as the basis for allocating their tax liability to reflect income from New York sources. Generally, this is limited to wages and other income from performing services or conducting a trade or business in New York, and gains from the sale of real property located in New York. Also, New York-source modifications include those modifications which relate to income from New York sources. However, federal-source NYAGI is used in the sampling of nonresident and part-year resident returns, and in the distributional analysis of these taxpayers.

Some major differences exist between income defined for tax purposes and the personal income series for New York published by the U.S. Department of Commerce's Bureau of Economic Analysis. Personal income is more comprehensive in that it includes most

federal exclusions from income, such as:

- a) tax-exempt interest;
- b) workers compensation benefits;
- c) payments in kind;
- d) public assistance transfer payments;
- e) social security benefits; and
- f) imputed income (e.g., the estimated rental value of owner occupied housing).

On the other hand, personal income is limited to New York State residents and does not include capital gains. Income defined for tax purposes includes both certain income earned by nonresident taxpayers, and capital gains.

Forms

Short Form: IT-150 used by resident taxpayers who have limited income sources, use the standard deduction, and make limited use of credits.

Long Forms: IT-201 and IT-203, used by taxpayers reporting income from several sources, making adjustments to income, claiming itemized deductions, and/or using several credits. Nonresidents and most part-year residents use the long form IT-203, which is similar to the IT-201 used by resident taxpayers.

Fiduciary Form: IT-205, used by fiduciaries of estates and trusts

Nontaxable Returns	A return with no tax liability, or a negative tax liability resulting from refundable credits.
Nonresident	A taxpayer who is not a resident for the entire tax year.
Part-Year Resident	A taxpayer who changes from a resident to a nonresident, or from a nonresident to a resident, during the tax year.
Return	Income tax forms IT-150, IT-201, and IT-203. A husband and wife filing a joint return are considered to be one taxpayer. Fiduciaries of estates and trusts file form IT-205.
Taxable Return	A return with any amount of positive tax liability.

Taxable Year The annual period for which the taxpayer computes income earned or received. This study includes tax returns filed for the calendar year 2009 and fiscal years ending before February 1, 2010.

Tax Liability For residents, the amount of tax is based on New York taxable income. The tax is computed by subtracting allowable deductions and exemptions from New York adjusted gross income, and multiplying the remainder by the appropriate New York State tax rate schedule. The result, minus the amount of allowable credits, equals tax liability. “Negative tax liability” refers to the amount of refundable credits received by persons who otherwise have a zero tax liability.

The computation for full-year nonresidents and part-year residents is different. They first compute their base tax through the applicable tax rate schedule and subtraction of the household, earned income, and dependent care credits. They then multiply this after-credit liability by the ratio of New York-source NYAGI to total NYAGI to arrive at a prorated tax. After subtracting other, refundable credits, final New York tax liability results.

Taxpayer An individual or married couple who files a return with some amount of positive tax liability. When married couples file separate returns, each spouse constitutes a taxpayer.

Appendix B: Description of the Sample

The sample file used to derive the results in this study does not fully account for total tax liability as shown in collection data. It is based on timely filed returns for the current year and does not include late or delinquent returns, or those delayed by audit or processing factors. Timely filed returns are those filed by April 15th or, where extensions are requested, by the extension due date. Also excluded are fiduciaries on form IT-205.

Data in this report are based on a sample of over 764,000 personal income tax returns of all types, selected from a total of approximately 9.5 million returns. A sample is conducted to eliminate the need to tabulate components of income and deductions from all tax returns. However, a sample produces the undesirable effect of a sampling error. This error can be reduced by stratifying the sample. For 2009, the IT-150 and IT-201 resident returns in the sample were stratified by income in six major regions of the state. The sample was also stratified by IT-203 part-year and IT-203 full year nonresident by income class. Within the resident, part-year resident, and full-year nonresident categories, returns were additionally stratified by deduction type (standard or itemized) and, within these categories, by credit type (business, personal, or no credits claimed).

The sampling error depends not only on the sample size, but also on the allocation of the sample to the different strata of income classes and return types. For this study, the allocation of the sample was computed according to statistical principles which minimized the sample size while maintaining or improving the precision of the estimation of total income, tax liability and six of the most important federal components of income in comparison to prior studies. In general, the sampling plan requires the proportion of returns to be sampled to increase with income. The sample is based on New York adjusted gross income and drawn according to ratios defined as the selection of one out of every “n” returns.
