Introduction

This statistical report provides information on households receiving real property tax circuit breaker credits as provided by Article 22, Section 606(e), of the New York State Tax Law. Qualified individuals may claim a credit in the amount of 50 percent of excess real property taxes, determined by the level of household gross income, and subject to certain specified conditions and limits. Eligibility for the credit depends on the size of household gross income (\$18,000 or less), property use, and the value of the property or the adjusted rent of a tenant. The credit claimant must be a resident of the State for the entire taxable year. The maximum credit is \$375 for taxpayers age 65 and over and \$75 for taxpayers under age 65. The amount of the credit decreases as household gross income increases. Only one credit is allowed per household.¹

This particular report contains two years of real property tax circuit breaker credit use. An analysis of the data for the most recent tax year of 2000 is in the body of the report. Appendix A contains data tables for the 1999 income tax year.

This report presents detailed information on circuit breaker credit use in each New York State county. Number of claims, total credits and average credit are displayed by filer age, type of residence and household income for the 2000 income tax year. In addition, the data tables include information on the number of claims filed without a personal income tax return. In effect, these stand-alone claims represent households with no New York State personal income tax liability receiving a cash payment attributable to the credit. Appendix B contains a copy of the 2000 form used to claim the credit, IT-214 Claim for Real Property Tax Credit for Homeowners and Renters.

¹ Information on claiming the credit, definitions for tax-related terms and answers to frequently asked questions appear in Publication 22, General Information on New York State's Real Property Tax Credit for Homeowners and Renters, which is prepared annually by the Department of Taxation and Finance.

Summary Statistics

For 2000, 298,736 households claimed the credit. The total amount of credits claimed exceeded \$32.1 million, with an average credit of \$107.57. Table 1 provides a general statistical overview of the 2000 real property circuit breaker tax credit.

14,001 - 18,000	31,943	1,755	54.95

Major statistical highlights include:

- Almost 64 percent of the credit claimants were under age 65. However, these households received less than 34 percent of the total credit. This is because the maximum value of the credit for under age 65 households is \$75 while householders age 65 and over can earn a credit up to a maximum of \$375.
- More than 88 percent of the households claiming the credit were renters. They claimed 88 percent of the total credit for an average of \$107.08 per household.
- Homeowners, though fewer in number than renters, received a larger average credit of \$111.39.
- In 2000, the number of households claiming the credit decreased by 14,662 or 4.7 percent compared to 1999. Although total credit

claims decreased by \$1.2 million in 2000, the average credit rose one percent to \$107.57.

- Of all 2000 claims, 53 percent were filed without a regular New York State income tax return. In effect, these filers had no State income tax liability and were not required to file a tax return. However, because these filers met the residency requirements, had household gross income of \$18,000 or less, owned real property with a total market value of \$85,000 or less, and met the monthly rental limitations for renters among other conditions, they were still entitled to a credit for part of the real property taxes or rent they paid during 2000.

Table 2 displays a summary of credits received by residents of each county in New York for 1999 and 2000. Year-over-year, the number of claims requested by residents declined in all but eleven counties.

Table 3 summarizes real property circuit breaker tax credit (RPCBTC) use from 1986 through 2000. The current RPCBTC income and

residence eligibility criteria have existed since 1985. Some observations derived from examining the program during the last fifteen years include:

- The average credit claimed by individuals under 65 years old has dropped 3.4 percent during the fifteen year period.
- In contrast, the average credit claimed by individuals age 65 and over had increased almost steadily between 1986 and 2000, growing by 31.1 percent over the fifteen year period. The only year that saw a substantial decline was 1998, where data indicates that the average credit declined by approximately 9 percent from the previous year's figure.
- The share of total credit value claimed by those individuals age 65 and over had increased from slightly more than one half to almost two thirds between 1986 and 2000.

Table 4 compares the amount of real property taxes paid, the number of real property tax credits, and the amount of those credits for homeowners age 65 and over for tax years 1999 and 2000. Table 5 displays the average amount of real property taxes paid, average household income and average amount of credits. The amount of real property tax credit

that homeowners are eligible for is determined by subtracting a percentage of their household gross income from the real property taxes paid (including school district taxes). The percentage of household income subtracted from real property taxes increases with income up to an eligible income limit of \$18,000.

Table 4 indicates that the total amount of credit claimed by homeowners age 65 and over declined by 13.6 percent in 2000. The drop in the credit is due to a 15.1 percent decrease in the number of homeowners age 65 and over claiming the credit. The data in Table 5 shows that the average household income for homeowners age 65 and over declined by 0.5 percent from 1999 to 2000, while the average property tax remained constant. However, the average credit amount increased by 1.7 percent.

Table 6 indicates that the total amount of credit claimed by homeowners under age 65 also declined in 2000. This 18.4 percent drop in the credit is also primarily due to a decrease in the number of homeowners under age 65 eligible for the credit. A decrease in property taxes paid also contributed to the drop in total credits claimed. The data in table 7 indicates that average household income of homeowners under age 65 declined by 2.2 percent from 1999 to 2000 and the average property tax declined by 3.6 percent. This resulted in a 9 percent decline in the average credit.

Appendix B: Claim for Real Property Tax Credit for Homeowners and Renters

Claim for Real Property Tax Credit for Homeowners and Renters

IT-214

Form with fields for personal information, social security numbers, mailing address, and New York residence address.

- 1 Were you a New York State resident for all of 2000?
2 Did you occupy the same residence for at least six months during 2000?
3 Did you own real property, with a current market value of more than \$85,000 during 2000?
4 Can you be claimed as a dependent on another taxpayer's 2000 federal return?

If you checked No on lines 1 or 2, or Yes on lines 3 or 4, stop; you do not qualify for this credit.

- 5 Did you live in a nursing home, public housing, or other residence completely exempted from real property taxes in 2000?
6 Including yourself, how many members of your household are filing Form IT-214?
7 Were any of the household members included on line 6 (or your spouse, if this is a joint claim) 65 or older on January 1, 2001?
8 Did you own or pay rent for your residence during 2000?

Complete Schedule A or B, and Schedule C, on the back before continuing.

- 9 Did you enter an amount for the exemption on line 20 of this claim?
10 Homeowners: enter amount from line 21. Renters: enter amount from line 25
11 Enter household gross income from line 34 (If more than \$18,000, stop; you do not qualify. If "0" or less, leave lines 12 and 13 blank)
12 Enter from the table below the rate that applies to your household gross income
